### Shipbuilding and Conversion, Navy

For expenses necessary for the construction, acquisition, or conversion of vessels as authorized by law, including armor and armament thereof, plant equipment, appliances, and machine tools and installation thereof in public and private plants; reserve plant and Government and contractor-owned equipment layaway; procurement of critical, long lead time components and designs for vessels to be constructed or converted in the future; and expansion of public and private plants, including land necessary therefore, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title.

In all: \$19,902,757 to remain available for obligation until September 30, 2032: *Provided*, That additional obligations may be incurred after September 30, 2032, for engineering services, tests, evaluations, and other such budgeted work that must be performed in the final stage of ship construction: *Provided further*, That none of the funds provided under this heading for the construction or conversion of any naval vessel to be constructed in shipyards in the United States shall be expended in foreign facilities for the construction of major components of such vessel: *Provided further*, That none of the funds provided under this heading shall be used for the construction of any naval vessel in foreign shipyards.

<b>Description:</b> MISSION: Strategic Deterrence. The COLUMBIA Class Program is an Acquisition Category (ACAT) ID Major Defense Acquisition Program (MDAP) to design, construct, and deliver a replacement for the OHIO Class Fleet Ballistic Missile Submarines (SSBNs), which begins retiring at a rate of one per year beginning in 2027. The mission of the COLUMBIA SSBN is to maintain an appropriate state of readiness to assist in deterring nuclear attack on the United States and its allies. In the event deterrence should fail, the force must be capable of launching missiles against pre-planned or adaptively planned targets. To fulfill this mission COLUMBIA SSBNs must be capable of performing extended strategic deterrent patrols without requiring assistance or replenishment. It does not have a requirement for additional capabilities or other missions unrelated to survivable strategic nuclear deterrence.  Armament: Torpedo Tubes Ballistic Missile Tubes  Major Electronics: Trident D5 Strategic Weapons System Command, Control, Communications and Intelligence System - Open System Architecture - Twenty-three Subsystems

<b>Line Item MDAP/MAIS Code:</b> 444			
<p>Note:</p> <p>FY2021 is the year of authorization for the lead ship, USS COLUMBIA, and is a new start program due to FY2021 being the first year of incremental full funding. The budget request supports detailed design and construction of Contractor Furnished Equipment (CFE) and Government Furnished Equipment (GFE) systems to build, test, outfit, and deliver SSBN826. Funding also supports Continuous Production of Missile Tubes, Advance Construction (AC), Economic Order Quantity (EOQ) for Multi-Program Procurement, Continuous Production of Shipyard Manufactured Items, and Supplier Development to reduce COLUMBIA Class construction schedule risk executed in accordance with enhanced acquisition authorities contained within the U.S.C. 2218a. These funds are required in October of 2020 to ensure the COLUMBIA Program meets program schedules and the components will meet in yard need dates to support on time construction start and delivery. The Navy intends to pursue a block buy contract for the first two COLUMBIA class submarines (SSBN826 and SSBN827). This strategy provides industrial base stability, production efficiencies, and cost savings when compared to an annual procurement with options cost estimate.</p> <p>Note: The Navy and Electric Boat reached a signed settlement on 20 December 2019 for awarding the COLUMBIA Build I modification (SSBN 826, SSBN 827, and associated design/support efforts) planned for FY 2020. This will be a modification of the current IPPD contract (N00024-17-C-2117). Award of this modification (with an option for hulls 826 and 827) is targeted for third quarter FY 2020 (originally planned for first quarter FY 2021). This is in line with the program's approved Acquisition Strategy. The program will request authorization of SSBN 826 in FY21, funded with three years of incremental funding in FY21-23, and authorization of SSBN 827 in FY24, funded with two years of incremental funding in FY24-25.</p> <p>Since the FY 2020 President's Budget request, the COLUMBIA Class Program continues investment in initiatives to reduce construction schedule risk and enable cost savings (Multi-Program Material Procurement, Continuous Production of Missile Tubes/Outfitting, Ordnance Systems and Shipyard Manufactured Components, Economic Order Quantity efforts, and Advance Construction). Increased investment in Strategic Weapons System (SWS) Shipboard Systems EOQ and Continuous Production leverages additional opportunities to mitigate obsolescence and construction schedule risks, and realize additional cost savings outside of the FYDP. The first Missile Tube Module (MTM) was funded through RDTEN PE 0603595N for \$617M.</p>

<p><b>Description:</b>          The COLUMBIA ELECTRONICS budget funds procurement of the Non-Propulsion Electronics System (NPES), which is the collection of command and control subsystems required to provide all of the non-strategic warfighting, navigation, communications, and crew information technology functions. The Sonar P-35 item contains acoustic sensors and processing electronics required to detect, classify, track and localize surface and submerged contacts. This includes Large Aperture Bow (LAB) array hydrophones, outboard electronics bottles, the Low Cost Conformal Array (LCCA), the AN/WSQ-9 signal analysis system, acoustic intercept and miscellaneous single purpose function sensors, total ship monitoring system (TSMS) , two (2) tactical towed arrays, high frequency sail array, and inboard signal conditioning and display electronics capacity to support both GFE sensors and the CFE Large Vertical Array (LVA). The SONAR P-35 includes engineering services required to produce the sonar logistics products, perform equipment installation, provide construction window field support/troubleshooting/repair, and support platform compatibility engineering, integration, and testing. Other costs include software, initial spares, ship systems data, and SONAR program management labor.</p>

<b>Description:</b> The COLUMBIA ELECTRONICS budget funds procurement of the Non-Propulsion Electronics System (NPES), which is the collection of command and control subsystems required to provide all of the non-strategic warfighting, navigation, communications, and crew information technology functions. The EW P-35 item contains the processing electronics and software required to detect surface borne electromagnetic energy and classify threat emissions spanning a variety of signal types and frequency range. This includes the AN/BLQ-10 signal processing, display and control system and TYPE 20/24 antenna below deck processing electronics. The EW P-35 includes engineering services required to produce the EW logistics products, perform equipment installation, provide construction window field support/troubleshooting/repair, and support platform compatibility engineering, integration, and system testing. Other costs include software, initial spares, ship systems data, and EW program management labor.

<b>Description:</b> The propulsor consists of Ni-Al-bronze components and assemblies, a monel bearing support structure, other engineered components and supporting items for corrosion protection, noise monitoring, etc. The purpose of the propulsor is to generate proper thrust to propel the ship at a rated speed within the approved limits of torque and shaft RPM, while at the same time meeting acoustic and structural requirements. This design is unique to the COLUMBIA Class. The propulsor consists of a large quantity of government supplied material and contracts for specific engineered components.

<b>Total</b>				<b>1</b>	<b>5.960</b>		
<b>Description:</b> Advanced Carbon Dioxide (CO2) Removal Unit (ACRU) will replace legacy CO2 removal equipment on COLUMBIA Class Submarines. The ACRU uses a solid sorbent material vice the hazardous liquid amine used in existing CO2 scrubbers. The ACRU is Government Furnished Equipment for the first two hulls and will be procured to support EB's integration schedule and required in year need dates. The solid sorbent material will be procured separately from the ACRUs. On-board spares, drawing updates and Government technical and contractual oversight, and other costs are also included in the engineering and Other costs.

## Description:

(1) PLANS: COLUMBIA Class Lead Design Yard and program office support for the detail design for the Common Missile Compartment, Strategic Weapons System, Propulsion Plant, and Rest of Ship. The Program is targeting 83% design completion for the entire ship at construction start (October 2020). This design maturity target is necessary to achieve the aggressive 7 year lead ship construction time for the lead ship and subsequent construction spans for the Class, which is required to support Strategic Deterrent mission requirements - there is no margin to patrol dates. Detail design activities also support critical engineering analysis and risk reduction efforts. This line reflects adjustments made based on the award of the Integrated Product and Process Development (IPPD) contract.

(2) SUPPLIER DEVELOPMENT: COLUMBIA Class, in coordination with Congress, continues to execute Supplier Development to de-risk construction schedules, strengthen submarine industrial base health, ensure on-time delivery of quality components and increase sub-vendors' ability to accept shipbuilder outsourced work. These funds execute supplier improvement and facilitization actions to increase capability of existing suppliers, increase capacity where needed, and qualify new suppliers in market spaces with capacity challenges. Initiatives include developing alternate sources for high-risk suppliers, developing sources for complex parts traditionally built at the shipbuilders that have been identified for strategic outsourcing, performing process and facility improvements with existing sources, and qualifying existing sources for more stringent requirements. Investment in the sub-vendor supplier base is required to promote facilities investment and vendor qualification to ensure adequate industrial capacity, and reduce COLUMBIA Class construction schedule risk.

(3) BASIC CONSTRUCTION - SHIPBUILDER PROCURED LLTM: Funding is required to support long lead time shipbuilder procured material (for example the Weapons Handling, Air Conditioning Unit, Diesel Generator Set, and Reverse Osmosis Unit). These and other components are required early in the construction phase to meet the delivery schedule. 3 Year AP is required for long lead shipbuilder procured equipment for ships 2-12 as determined through actual production spans on recently-completed prototype equipment and updated shipbuilder required-in-yard need dates to support advance construction and serial production of follow-on COLUMBIA hulls. Without these efforts the construction schedules are not supported. SSBN 827 LLTM scope is also reflected in EOQ to support multiprogram procurement to mitigate construction risk and strengthen submarine industrial base (see foot note #6 - funds are reflected in this category). SSBN 828 and 829 do not currently have funds for EOQ in support of multiprogram procurement and therefore the Shipbuilder LLTM appears to be much larger for 828 and 829 than 827 but it is not. It is solely a function of 827 having some of its LLTM in EOQ.

(4) BASIC CONSTRUCTION - MISSILE TUBE CONTINUOUS PRODUCTION: COLUMBIA Class continues to execute Continuous Production of Missile Tubes to reduce schedule risk, improve manufacturing efficiencies, improve vendor learning, maintain critical production skills, and reduce costs by leveraging high-volume procurements. These benefits increase schedule margin and reduce risk to follow ship deliveries, while also achieving cost reduction savings. Missile Tubes produced for SSBN 826 are funded through RDT&E,N Program Element 0603595N, Project Number 3220.

(5) BASIC CONSTRUCTION - ADVANCE CONSTRUCTION: Advance Construction (AC) efforts are to de-risk construction schedule and improve probability of on-time delivery. AC begins construction activities in key areas to gain schedule margin and reduce controlling path risks. AC key areas include, but are not limited to, the Bow (Sections 1A and 1B in Supermodule 1 that includes the forward Ballast Tanks and Hemi-head), Stern (Sections 9B and 9C in Supermodule 6 that includes the X-Stern and aft Ballast Tanks and Hemi-Head) and Common Missile Compartment (CMC) adjacent areas contained in Supermodule 2 that include the Missile Compartment Control Module (MCCM). AC will begin on structural fabrication areas that have sufficient design maturity and material availability to begin construction and some outfitting. These areas include MCCM Deck Module Fabrication, Mid-Span Tank complex and Foundation Fabrication, and Missile Compartment Forward Bulkhead and S2C Hull Cylinder Fabrication. AC efforts improve

<b>Exhibit P-10, Advance Procurement Requirements Analysis (page 2 - Budget Funding Justification):</b> PB 2021 Navy		<b>Date:</b> February 2020
<b>Appropriation / Budget Activity / Budget Sub Activity:</b> 1611N / 01 / 1		<b>P-1 Line Item Number / Title:</b> 1045 / COLUMBIA Class Submarine
<p>efficiency by smoothing workload at Quonset Point and capture efficiencies. The reduced funding in 2024-2025 is a combination of budget reductions to SSBN 827 and 2 years of escalation impacts between SSBN 827 and 828. Budget deltas between SSBN 829-830 hulls are related to ship schedules and escalation impacts.</p> <p>(6) BASIC CONSTRUCTION - EOQ IN SUPPORT OF MULTI-PROGRAM PROCUREMENT: COLUMBIA Class continues to execute Multi-Program Procurement as authorized by US Code 10 2218a (NSBDF) subsection (f), to align shipbuilder procured material procurements with COLUMBIA Class funding with funds budgeted for VIRGINIA Class (LI 2013) and CVN (LI 2001) for common components and vendors, where applicable. Appreciable risk mitigation is provided for COLUMBIA Class construction schedules through acceleration of material procurement, ensuring increased readiness to support construction need dates and through supplier base management and workload leveling. MPMP strengthens the industrial base to improve material availability and avoid construction delays due to late material. COLUMBIA Class Production Backup Units will procure a shipset of critical long lead time material to serve as rolling construction assets throughout COLUMBIA Class construction to be consumed in the event of unforeseen issues from late material or obsolescence to reduce schedule risk and avoid production disruptions from late material, and ensure Required In Yard (RIY) dates are met for compressed shipbuilding schedules. Material not consumed during construction will be consumed on the 12th hull if not used. PBUs also strengthen critical at-risk vendors in the sub-tier industrial base, reducing the risk of future obsolescence issues and production disruptions.</p> <p>(7) BASIC CONSTRUCTION - SHIPYARD MANUFACTURED ITEMS CONTINUOUS PRODUCTION: COLUMBIA Class continues to execute Continuous Production of selected Shipyard Manufactured Items (US Code 10 2218a subsection (i)) to reduce schedule risk, improve manufacturing efficiencies, improve learning, maintain critical production skills, and reduce costs by leveraging high-volume procurements. Continuous production of items with long lead time material requirements which are difficult to manufacture will ensure critical material is available to support construction schedules. These benefits will increase schedule margin and reduce risk to follow ship deliveries, while also achieving cost reduction savings through workforce level loading and minimizing the effects of large variations in demand and procurement efficiencies. Examples of Shipyard Manufactured Items include Spherical Air Flasks, Hull Valves, Logistics Escape Trunks, and Torpedo Tubes.</p> <p>(8) NUCLEAR PROPULSION PLANT EQUIPMENT: Nuclear Propulsion Plant Equipment AP is required to fund long-lead time propulsion plant equipment, and ensure production capability that supports projected production quantities. To support the COLUMBIA Class' implementation of advanced modular construction methods to drive cost efficiency, reactor plant components must be delivered earlier in the construction process. The component delivery timeline is in line with that of the VIRGINIA Class submarines. 3 Year AP is required for Propulsion GFE for ships 2-12 as determined through actual production spans on recently-completed prototype equipment and updated shipbuilder required-in-yard need dates to support advance construction and serial production of follow-on COLUMBIA hulls. Without these efforts the construction schedules are not supported.</p> <p>(9) HM&amp;E: Hull Mechanical &amp; Engineering AP is required to align the Propulsor procurement and production schedule with COLUMBIA Class Advance Construction schedule acceleration and support the overall ship schedules.</p> <p>(10) ORDNANCE SWS SHIPBOARD SYSTEMS - LLTM: Ordnance SWS Shipboard Systems AP is required to fund Long Lead Time Material (LLTM) for the Strategic Weapon System (SWS) shipboard components to meet COLUMBIA (CLB) Class Government Furnished Equipment (GFE) Required-In-Yard (RIY) dates to support construction activities for CLB. AP is required to procure selected SWS Launcher and Fire Control Subsystem components including launch tube assemblies and construction support equipment, launch tube umbilical housings, launcher ejector group and vertical support group equipment, and Fire Control power and network equipment and sub-assemblies. The SWS shipboard components have a lead time of 12-48 months and are required by the shipbuilder early in the construction phase to meet the ship delivery schedule (beginning in September 2020 for SSBN 826 and April 2023 for SSBN 827, and continue for the rest of the Class). This line does not fund any efforts related to the procurement of the TRIDENT II D5 Missile. (Note: SWS components requiring 48 month lead time for SSBN 826 are procured through RDT&amp;E,N Program Element 0603595N, Project Number 3220 in support of lead ship Missile Tube Module prototyping). A delay to these LLTM purchases will impact the U.S. Navy's ability to meet the shipbuilder's RIY dates for tactical hardware resulting in increased schedule risk to construction and ship delivery.</p> <p>(11) ORDNANCE SWS SHIPBOARD SYSTEMS - EOQ: Ordnance SWS Shipboard Systems EOQ funding (US Code 10 2218a subsection (f)) is required for large lot procurements of SWS shipboard components to mitigate significant obsolescence, requalification and vendor risk while ensuring SWS homogeneity and consistent SWS system performance across all COLUMBIA Class hulls. Examples include SWS Launcher Subsystem Detonator Power Assembly electronics components and SWS Fire Control Subsystem components such as network switch memory and flash devices, Navigation Timing Interface Module oscillators and display units. Since the FY 2020 President's Budget request, funding for SWS Shipboard Systems EOQ increased to leverage additional opportunities to mitigate obsolescence and construction schedule risks, and realize additional cost savings outside the FYDP. This line does not fund any efforts related to the procurement of the TRIDENT II D5 Missile.</p> <p>(12) ORDNANCE SWS SHIPBOARD SYSTEMS - CONTINUOUS PRODUCTION: Ordnance SWS Shipboard Systems Continuous Production (US Code 10 2218a subsection (i)) of SWS Navigation Subsystem, Inertial Navigation Systems and Gyros is required to procure critical components to ensure homogeneity and consistent SWS system performance across the Navigation unit builds, maintain critical production and fabrication skills, eliminate production re-starts and potential re-qualification risk while gaining manufacturing efficiencies and mitigating SWS Navigation Subsystem obsolescence across all COLUMBIA Class hulls during construction. These benefits will reduce schedule risk by ensuring on-time deliveries of SWS Navigation GFE to the shipbuilder, and result in cost savings outside of the FYDP. Follow-on</p>

<b>Exhibit P-10, Advance Procurement Requirements Analysis (page 2 - Budget Funding Justification):</b> PB 2021 Navy		<b>Date:</b> February 2020
<b>Appropriation / Budget Activity / Budget Sub Activity:</b> 1611N / 01 / 1		<b>P-1 Line Item Number / Title:</b> 1045 / COLUMBIA Class Submarine
<p>procurements are outside the FYDP. Since the FY 2020 President's Budget request, funding for SWS Shipboard Systems Continuous Production increased to leverage additional opportunities to mitigate obsolescence and construction schedule risks, and realize additional cost savings outside the FYDP. This line does not fund any efforts related to the procurement of the TRIDENT II D5 Missile.</p> <p>(13) NFPC EXTERNAL POWER UPGRADE: Advance Procurement funding was required to support the Naval Foundry and Propeller Center External Power Upgrade. The Naval Foundry and Propeller Center required upgrades to the private utility provider's infrastructure in order to provide an additional 16.5MW of electrical power to the facility. This requirement is driven by a required 85-ton furnace and six additional large machines required for concurrent COLUMBIA and VIRGINIA Class manufacturing. The Power Upgrade was completed in March 2019 to support critical path COLUMBIA Class propulsor prototype manufacturing demonstrations in FY19 through FY20. The total estimate for this effort is \$46M, with \$14M executed with FY17 funds.</p> <p>(14) ELECTRONICS: Electronics Equipment AP is required to fund the long-lead time material for the Command and Control System Module (CCSM). AP for the CCSM plays a critical role in early system installation and test in order to maintain the CCSM out of the critical path to ship delivery and minimize risk to ship construction. AP is required to procure selected electronics and associated pre-cable kits, cabling, connector plates and mechanical structures to be installed in this module in accordance with Shipyard Government Furnished Equipment (GFE) Delivery Dates. Pre-cable kits enable shipyard cable runs and platform interface verification prior to electronics installation. Mechanical structures establish footprint unique packaging for efficient electronics installation. This funding also enables the COLUMBIA program to procure Long Lead Time Material (LLTM) and shipboard components for the SONAR system, which have lead times of up to 24 months and are required to be delivered to the shipbuilder beginning in May 2021 to meet COLUMBIA Class IPPD contract requirements.</p> <p>*Note: "When Required" is the number of months required before ship delivery.</p>

Description: To provide credible, sustainable, independent forward presence during peacetime without access to land bases; operate as the cornerstone of a joint and/or allied maritime expeditionary force in response to crisis; and carry the war to the enemy through joint multi-mission offensive operations.  The Navy designed the FORD Class aircraft carrier with the warfighting capability essential for the 21st century, and the flexibility and resilience to rapidly adapt to emerging threats. The Ford class incorporates advances in technology such as a new reactor plant, propulsion system, electric plant, Electromagnetic Aircraft Launch System (EMALS), Advanced Arresting Gear (AAG), machinery control, and integrated warfare systems that increase lethality, while lowering life cycle costs through reductions in maintenance and manning requirements. Increased Service Life Allowances (SLA) for weight and stability enable future modernization and the ability to adapt to new missions over the ship's 50-year life cycle.  CVN 80 and CVN 81 were awarded under a two-ship buy. CVN 80 is a separate contract line item under the same contract as CVN 81, which allows discrete hull costs to be captured. The CVN 80/81 construction contract is a Fixed Price Incentive (Firm Target) (FPIF) contract type that limits the Navy's liability and incentivizes the shipyard's best performance. The contract language guarantees a single technical baseline for both ships, which allows the shipyard to re-use engineering rollover products, minimize changes between the two ships and leverages economic order quantities for equipment and material procurement.  CVN 81 was moved to BLI 2004 in accordance with the Department of Defense Appropriations Act, 2020.

Total Electronics		233.681		250.697
Remarks:				
AN/SYY-1(V)1 Air Traffic Control System Shipboard replaces AN/TPX-42A(V)14, Carrier Air Traffic Control Center - Direct Altitude and Identify Readout (CATCC-DAIR) beginning with CVN79 and follow. AN/SYY-1(V)1 addresses obsolescence, incorporates existing AN/TPX-42A(V) functionality and will add additional capability for EASR and interfaces across all platforms.				
Global Positioning System, Navigation and Timing Service (GPNTS) is the next generation of navigation to address Fleet obsolescence issues. GPNTS replaces AN/SSN-6(V)X Block 4, Navigation Sensor System Interface (NAVSSI) on the CVN 80.				
AN/USQ-T52 Training Interface Unit (TIU) Advanced Training Domain (ATD) replaces AN/USQ-T46X(V)X, Battle Force Tactical Training System (BFTT) on CVN 79 and CVN 80.				
Next Generation Surface Search Radar (NGSSR) replaces AN/SPS-73A(V)12-Tech Refresh - Surface Search Radar on the CVN 80, due to SPS-73 no longer being in production.

Remarks:				
The Enterprise Radar Suite (ERS) consists of AN/SPY-6(V)3 Enterprise Air Surveillance Radar (EASR), AN/SPQ-9B Anti-ship Missile Defense (ASMD) Surface Surveillance and Tracking Radar and MK-9 Target Illuminators (TIs). These three systems combine to functionally replace the Dual Band Radar (CVN 78) on CVN 79 and follow. The \$10,948K cost on the CVN 79 represents a sunk cost paid for overruns associated with receiving the Volume Search Radar (VSR) from the DDG 1000 program and was originally planned for installation on CVN 79.				
Compact Swaging Machine (CSM) is replacing Socket Pouring (FY 2020 President's Budget request - Other Ordnance) on the CVN 79 - CVN 80.

<b>Description:</b> CANES will provide the Navy tactical/non-tactical information environment and infrastructure necessary to enable hosting, extended services reach-back and reach-forward, and relay functions. These capabilities will support real time and non-real time tactical/non-tactical edge connected, connectionless, and ad-hoc voice, video and data information exchange requirements. CANES replace and modernize afloat networks with hardware, software and enterprise services infrastructure to enable information warfare from and within the tactical domain. CANES provides complete infrastructure inclusive of hardware, software, processing, storage and end user devices for Unclassified, Coalition, Secret and Sensitive Compartmented Information (SCI) enclaves for all basic network services to Navy surface combatants, submarines and maritime operations centers. The POR CVN 79 is Increment 1.2 and CVN 80 is Increment 2.0.

**Description:**  
IFF is an approved and fully supported centralized Mark XII/XIIA Interrogator system. It uses one receiver transmitter that synchronizes video with up to four radar sweeps. It supplies synthetic video (symbolology) to, and accepts requests from, as many as 22 remote locations. It provides digital target reporting to the combat systems/weapon systems computer via full scan, sector, and/or pop-up interrogations. It provides instantaneous target reporting at requested range and azimuth through the use of an electronically-steered Antenna Group OE-120/UPX or OE-120B/UPX. It provides electronically evaluated Mode 4 target reporting directly to operators and over the combat systems/weapon system computer interface. It provides full redundancy so identification capabilities are retained in case of main processor, main antenna, or main receiver/transmitter failure.

**Contract Data:**

<b>Description:</b> AN/SYY-1(V)1 Air Traffic Control System, Shipboard is a processing and display system which correlates and fuses sensor inputs from radar and IFF. The correlated sensor data is displayed to Air Traffic Controllers in a 2D air picture to facilitate the safe and expeditious movement of air traffic operating in the carrier controlled area and launching from/recovering to the ship.

<b>Competition/Second Source Initiatives:</b> N/A																															
<b>Remarks:</b> This system replaces AN/TPX-42. AN/SYY-1(V)1 addresses obsolescence, incorporates existing AN/TPX-42A(V) functionality and will add additional capability and interfaces across all platforms.  CVN 79 - The award date and required award date have been updated from the FY 2020 President's Budget request to reflect the earliest hardware item put on contract and required to the shipbuilder.  CVN 80 - Hardware is being procured in FY 2021 for CVN 80 and CVN 81 via an EOQ buy to achieve the estimated price as reflected in the exhibit. The system is being procured in FY 2021 to make use of an existing contract already in place. A new contract would have to be negotiated if the hardware is not procured in FY 2021, which would potentially result in higher prices for the Department.

**Description:**  
 SEWIP Block 2 is a scalable Electronic Warfare enterprise suite to provide improved Electromagnetic Interference (EMI) mitigation and Combat System Interface capabilities to select new construction ships as well as upgrade current AN/SLQ-32(V)3 and (V)4 Electronic Warfare (EW) suites on existing ships. It provides enhanced shipboard Electronic Warfare (EW) for early detection, analysis, threat warning and protection from anti-ship missiles. SEWIP Block 2 focused on Electronic Support (ES) capability improvements.

<b>Description:</b> High Frequency (HF) Distributed Amplifier Group (DAG) is the Navy's Program of Record (POR) HF system and is the follow-on replacement of HF Radio Group (HFRG). HFDAG has a modular architecture and utilizes COTS equipment to the maximum extent possible. It provides Line Of Sight (LOS/Beyond Line of Sight (BLOS) voice and data transmission capabilities to USN Ships. The 16-channel CVN variant greatly improves capabilities from HFRG: (1) increases availability (Ao), (2) provides reprogrammable waveforms, (3) increases the number of waveforms available, (4) provides automatic link establishment (ALE).

**Description:**  
EMALS is an advanced technology electrically generated launching system that uses a moving electromagnetic field to propel aircraft to launch speed. EMALS is made up of six primary sub-systems: prime power interface, energy storage, energy distribution, power conversion, launch motor, and launch control subsystem. Benefits over the current C13 steam catapults include reduced weight and volume, greater launching flexibility for future aircraft, improved control, and reduced manning workload requirements.

**Contract Data:**

Program Year	Hull	Prime Contractor	Contract Method/Type	Award Date	New/Option	Quantity (Each)	Unit Cost (\$ M)
FY 2013	CVN 79	GENERAL ATOMICS	SS/FFP	May 2014	New	1	552.719
FY 2018	CVN 80	GENERAL ATOMICS	SS/FFP	Jan 2017	Option	1	542.163

**Delivery Date:**

Program Year	Hull	Earliest Ship Delivery Date	Months Required Before Delivery	Production Leadtime	Required Award Date
FY 2013	CVN 79	Sep 2024	93	48	Dec 2012
FY 2018	CVN 80	Mar 2028	57	48	Jun 2019

**Competition/Second Source Initiatives:**  
None

**Remarks:**  
The CVN 80 Spares P-35 category includes \$28.05M for CVN 78 Class Interim Spares.

Long Lead Time Materials Undefined Contract Action (UCA) awarded May 2014, Undefined Production UCA awarded June 2015 for CVN 79, and Production UCA definitized December 2016 for CVN 79 with option for CVN 80. CVN 80 option exercised January 2017 EMALS and AAG bundled savings on single production contract for CVN 79 and CVN 80 are reflective of contract negotiations.

Dates have been updated from the FY 2020 President's Budget request to reflect the earliest in yard need date.

CVN 79 - Negotiations with the Original Equipment Manufacturer (OEM) were required to negotiate improvements to the contractor's schedule since award was late. Additionally, several changes to the CVN 79 construction contract were required to achieve the ship delivery date.

<b>Description:</b> The Enterprise Air Surveillance Radar (EASR) suite will be a modern long-range, three-dimensional (3D) radar used to search, detect and provide space-stabilized, three-coordinate (range, bearing, height) data for air intercept control and designation to a weapon system and Air Traffic Control (ATC) system. The Enterprise Radar Suite (ERS), which includes EASR, is intended to replace the functions that Dual Band Radar (DBR) performed on CVN 78, but at a much lower cost.

<b>Remarks:</b> The hardware configuration for the CVN 79, CVN 80, and CVN 81 (non-rotating) is essentially three times that of a rotating configuration, which is currently planned for the big deck amphibious warfare ships. CVN 79, CVN 80, and CVN 81 will have three phased arrays mounted around the island, while the amphibious warfare ships will use one rotating array. Below deck equipment is also provided at a larger scale with the non-rotating variant of EASR.  The Enterprise Radar Suite (ERS) consists of AN/SPY-6(V)2 Enterprise Air Surveillance Radar (EASR), AN/SPQ-9B Anti-Ship Missile Defense (ASMD) Surface Surveillance and Tracking Radar, and MK-9 Target Illuminators (TIs).  Dates have been updated from the FY 2020 President's Budget request to reflect the earliest in yard need date.

<b>Description:</b> AAG provides an upgraded ability to recover all existing and projected aircraft carrier based air vehicles. The AAG system will replace the Mark 7 arresting gear system found on the NIMITZ class carriers and will be the aircraft recovery system for the CVN 79, CVN 80, and CVN 81. AAG consists of six primary systems: energy absorption subsystem, energy storage subsystem, dynamic control subsystem, thermal management subsystem, cross deck pendant, and the control subsystem.

<b>Remarks:</b> The Enterprise Radar Suite (ERS) consists of AN/SPY-6(V)3 Enterprise Air Surveillance Radar (EASR), AN/SPQ-9B Anti-ship Missile Defense (ASMD) Surface Surveillance and Tracking Radar and MK-9 Target Illuminators (TIs).  CVN 79 and CVN 80 requires MK-9 TIs to provide command guidance uplink capabilities for ship's self-defense. The increased costs are due to new production unit ship sets with the new transmitters. Increased costs since the FY 2020 President's Budget request for MK-9 TIs are due to the MK 73 transmitters being obsolete and no longer procurable.  Dates have been updated from the FY 2020 President's Budget request to reflect the earliest in yard need date.

**Description:**

To provide credible, sustainable, independent forward presence during peacetime without access to land bases; operate as the cornerstone of a joint and/or allied maritime expeditionary force in response to crisis; and carry the war to the enemy through joint multi-mission offensive operations.

The Navy designed the FORD Class aircraft carrier with the warfighting capability essential for the 21st century, and the flexibility and resilience to rapidly adapt to emerging threats. The Ford class incorporates advances in technology such as a new reactor plant, propulsion system, electric plant, Electromagnetic Aircraft Launch System (EMALS), Advanced Arresting Gear (AAG), machinery control, and integrated warfare systems that increase lethality, while lowering life cycle costs through reductions in maintenance and manning requirements. Increased Service Life Allowances (SLA) for weight and stability enable future modernization and the ability to adapt to new missions over the ship's 50-year life cycle.

CVN 80 and CVN 81 were awarded under a two-ship buy. CVN 81 is a separate contract line item under the same contract as CVN 80, which allows discrete hull costs to be captured. The CVN 80/81 construction contract is a Fixed Price Incentive (Firm Target) (FPIF) contract type that limits the Navy's liability and incentivizes the shipyard's best performance. The contract language guarantees a single technical baseline for both ships, which allows the shipyard to re-use engineering rollover products, minimize changes between the two ships and leverages economic order quantities for equipment and material procurement.

Remarks: AN/SYY-1(V)1 Air Traffic Control System Shipboard replaces AN/TPX-42A(V)14, Carrier Air Traffic Control Center - Direct Altitude and Identify Readout (CATCC-DAIR). AN/SYY-1(V)1 addresses obsolescence, incorporates existing AN/TPX-42A(V) functionality and will add additional capability and interfaces across all platforms.  Global Positioning System, Navigation and Timing Service (GPNTS) is the next generation of navigation to address Fleet obsolescence issues. GPNTS replaces AN/SSN-6(V)X Block 4, Navigation Sensor System Interface (NAVSSI).  AN/USQ-T52 Training Interface Unit (TIU) Advanced Training Domain (ATD) replaces AN/USQ-T46X(V)X, Battle Force Tactical Training System (BFTT).  Next Generation Surface Search Radar (NGSSR) replaces AN/SPS-73A(V)12-Tech Refresh - Surface Search Radar, due to SPS-73 no longer being in production.

<b>Description:</b> CANES will provide the Navy tactical/non-tactical information environment and infrastructure necessary to enable hosting, extended services reach-back and reach-forward, and relay functions. These capabilities will support real time and non-real time tactical/non-tactical edge connected, connectionless, and ad-hoc voice, video and data information exchange requirements. CANES replace and modernize afloat networks with hardware, software and enterprise services infrastructure to enable information warfare from and within the tactical domain. CANES provides complete infrastructure inclusive of hardware, software, processing, storage and end user devices for Unclassified, Coalition, Secret and Sensitive Compartmented Information (SCI) enclaves for all basic network services to Navy surface combatants, submarines and maritime operations centers. The POR is Increment 2.0.

<b>Total</b>				<b>1</b>	<b>6.438</b>																		
<b>Description:</b> IFF is an approved and fully supported centralized Mark XII/XIIA Interrogator system. It uses one receiver transmitter that synchronizes video with up to four radar sweeps. It supplies synthetic video (symbology) to, and accepts requests from, as many as 22 remote locations. It provides digital target reporting to the combat systems/weapon systems computer via full scan, sector, and/or pop-up interrogations. It provides instantaneous target reporting at requested range and azimuth through the use of an electronically-steered Antenna Group OE-120/UPX or OE-120B/UPX. It provides electronically evaluated Mode 4 target reporting directly to operators and over the combat systems/weapon system computer interface. It provides full redundancy so identification capabilities are retained in case of main processor, main antenna, or main receiver/transmitter failure.

<b>Description:</b> High Frequency (HF) Distributed Amplifier Group (DAG) is the Navy's Program of Record (POR) HF system and is the follow-on replacement of HF Radio Group (HFRG). HFDAG has a modular architecture and utilizes COTS equipment to the maximum extent possible. It provides Line Of Sight (LOS/Beyond Line of Sight (BLOS) voice and data transmission capabilities to USN Ships. The 16-channel CVN variant greatly improves capabilities from HFRG: (1) increases availability (Ao), (2) provides reprogrammable waveforms, (3) increases the number of waveforms available, (4) provides automatic link establishment (ALE).

<b>Description:</b> EMALS is an advanced technology electrically generated launching system that uses a moving electromagnetic field to propel aircraft to launch speed. EMALS is made up of six primary sub-systems: prime power interface, energy storage, energy distribution, power conversion, launch motor, and launch control subsystem. Benefits over the current C13 steam catapults include reduced weight and volume, greater launching flexibility for future aircraft, improved control, and reduced manning workload requirements.

<b>Description:</b> The Enterprise Air Surveillance Radar (EASR) suite will be a modern long-range, three-dimensional (3D) radar used to search, detect and provide space-stabilized, three-coordinate (range, bearing, height) data for air intercept control and designation to a weapon system and Air Traffic Control (ATC) system. The Enterprise Radar Suite (ERS), which includes EASR, is intended to replace the functions that Dual Band Radar (DBR) performed on CVN 78, but at a much lower cost.

<b>Competition/Second Source Initiatives:</b> None																							
<b>Remarks:</b> The hardware configuration (non-rotating) is essentially three times that of a rotating configuration, which is currently planned for the big deck amphibious warfare ships. EASR will have three phased arrays mounted around the island, while the amphibious warfare ships will use one rotating array. Below deck equipment is also provided at a larger scale with the non-rotating variant of EASR.  The Enterprise Radar Suite (ERS) consists of AN/SPY-6(V)3 Enterprise Air Surveillance Radar (EASR), AN/SPQ-9B Anti-ship Missile Defense (ASMD) Surface Surveillance and Tracking Radar, and MK-9 Target Illuminators (TIs).

<b>P-35 Category</b>				<b>FY 2020</b>			
				<b>Qty (Each)</b>	<b>Total Cost (\$ M)</b>		
Major Hardware				4	33.139		
Spares					0.791		
<b>Total</b>				<b>4</b>	<b>33.930</b>		
<b>Description:</b> MK-9 is an X-Band Illuminator that provides weapon communication and missile illumination.							
<b>Contract Data:</b>							
<b>Program Year</b>	<b>Hull</b>	<b>Prime Contractor</b>	<b>Contract Method/Type</b>	<b>Award Date</b>	<b>New/Option</b>	<b>Quantity (Each)</b>	<b>Unit Cost (\$ M)</b>
FY 2020	CVN 81	RAYTHEON	C/FFP	Mar 2026		4	8.285
<b>Delivery Date:</b>							
<b>Program Year</b>	<b>Hull</b>	<b>Earliest Ship Delivery Date</b>	<b>Months Required Before Delivery</b>	<b>Production Leadtime</b>	<b>Required Award Date</b>		
FY 2020	CVN 81	Feb 2032	47	24	Mar 2026		
<b>Competition/Second Source Initiatives:</b> None							
<b>Remarks:</b> The Enterprise Radar Suite (ERS) consists of AN/SPY-6(V)3 Enterprise Air Surveillance Radar (EASR), AN/SPQ-9B Anti-ship Missile Defense (ASMD) Surface Surveillance and Tracking Radar, and MK-9 Target Illuminators (TIs).  MK-9 TIs are required to provide command guidance uplink capabilities for ship's self-defense. The increased costs are due to new production unit ship sets with the new transmitters. Increased costs since the FY 2020 President's Budget request for MK-9 TIs are due to the MK 73 transmitters being obsolete and no longer procurable.  Dates have been updated from the FY 2020 President's Budget request to reflect the earliest in yard need date.

**Description:**

MISSION: To seek out and destroy enemy ships across a wide spectrum of tactical scenarios, working both independently and in concert with a battle group/other ships, providing Joint Commanders with early, accurate knowledge of the battlefield on which power may be projected from sea; covert striking power against targets ashore; the capability to establish covertly an expeditionary force on land; and the maritime strength to destroy enemy naval forces and interdict seaborne commerce.

NOTE: The program awarded the fourth Multi-Year Procurement (MYP) (Block V) contract on 2 December 2019 incorporating Acoustic Superiority modifications on all SSNs and Virginia Payload Module (VPM) on the second FY19 and subsequent SSNs. To support the award of the Block V MYP contract and fund construction of the FY19 Virginia Class Submarines (VCS), the program identified FY19 reductions in Government Furnished Equipment (GFE), specifically in Electronics and Nuclear Propulsion Plant Equipment. These Virginia Class exhibits reflect a 9 SSN Block V FY19-23 (2-2-1-2-2) incorporating changes for AS on all 9 SSNs and VPM on 8 (1-2-1-2-2). This contract includes an option for a 10th ship that may be exercised in FY21, FY22 or FY23. There is Economic Order Quantity (EOQ) in FY18-21 and FY17-22 Advance Procurement (AP) funding for Long-lead Time Material (LLTM) and detail design.

NOTE: Block V SSNs will include significant enhancements. All Block V and future SSNs will include modifications similar to SOUTH DAKOTA Insertion Program (SDIP) efforts performed via RDT&E (PE 0604558N/Prj 1947) which will provide enhanced capability and improved performance. VPM will be introduced on the second FY19 SSN and subsequently fielded on all follow-on Virginia Class submarines. VPM is an 84-foot hull section with four additional payload tubes, each capable of carrying seven Tomahawk cruise missiles or various other payloads. VPM helps mitigate the loss of undersea strike capability with the retirement of the Service's four guided missile submarines (SSGNs) in the mid-2020s. These changes to the baseline require additional funding which is shown in more detail on subsequent pages of these exhibits.

<b>Classification of Cost Estimate:</b> C					
<p><b>Justification:</b> FY21 funds one VCS with VPM incorporating Acoustic Superiority and some AP/EOQ for future Block V SSNs.</p> <p>Pricing for FY21 includes critical spare materials for a tenth hull as required by the VCS Block V MYP contract. This material includes non-nuclear CFE components bought with two-year and one-year AP and non-nuclear Economic Order Quantity material. Not included in this pricing is the two-year AP for government furnished equipment required for a tenth hull in the Block V MYP contract. As a result, the Gross Weapons System Cost (End Cost) is approximately \$1.4 billion higher than a single submarine procurement. Specifically:</p> <p>-FY19 and FY20 Advanced Procurement (AP) for the FY21 submarine procured 2 sets of components for a second FY21 submarine. FY19 two-year AP of \$611 million and FY20 one-year AP of \$309 million will be consumed on a future submarine</p> <p>-The \$200M appropriated in FY20 in support of the 10th submarine in the VCS Block V MYP will not be obligated except in support of a 10th shipset of GFE.</p> <p>-FY18, 19, and 20 Economic Order Quantity (EOQ) procured equipment for a 10-ship block buy which was critical to sustain the supplier base and an integral part of the Block V MYP contract award. FY18 EOQ of \$15.5 million, FY 19 EOQ of \$123 million, and FY20 EOQ of \$147 million will be consumed on a future submarine.</p> <p>Funding these critical spare materials early in the MYP is critical to level loading supplier's work orders and maintaining the industrial base. All of these spares will be consumed in a future submarine.</p> <p>The Block VI (FYs 24-28) technical baseline has not yet been established. The funding values shown herein for FY24 and FY25 are for planning purposes only.</p> <p><b>Footnotes:</b>  <sup>(1)</sup> All construction starts are on the first day of the stated month and deliveries are on the last day of the stated month. Block IV delivery dates are current program projections (SSN 792-SSN 801).  <sup>(2)</sup> These Virginia Class exhibits reflect a 9 SSN Block V FY19-23 (2-2-1-2-2) incorporating changes for AS on all 9 SSNs and VPM on 8 (1-2-1-2-2). Block V dates are contracted delivery dates. (SSN 802-810).</p>

UNCLASSIFIED

Exhibit P-5c, Ship Cost Analysis: PB 2021 Navy		Date: February 2020
Appropriation / Budget Activity / Budget Sub Activity: 1611N / 02 / 1	P-1 Line Item Number / Title: 2013 / Virginia Class Submarine	
<p>These Virginia Class exhibits reflect a 9 SSN Block V FY19-23 (2-2-1-2-2) incorporating changes for AS on all 9 SSNs and VPM on 8 (1-2-1-2-2).</p> <p>The program identified cost efficiencies in the Electronics category to support the award of the Block V MYP contract. The overall cost efficiencies from the FY 2020 President's Budget request to FY 2021 President's Budget request are carried through all future program years. Additionally, the Electronics profile fluctuation (FY19-21) reflects improved alignment of non-recurring engineering support to physically and electronically integrate the pre-planned NPES TI-24 Tech Insertion configuration change and various phased Undersea Dominance payloads.</p> <p>The FY 2021 President's Budget request reflects an out-year cost reduction of VIRGINIA Class Submarine (VCS) nuclear propulsion equipment. Two areas of cost reduction include: (1) risk reduction associated with successful plant criticality of the first Virginia Forward Fit nuclear reactor core in PCU VERMONT (792), and (2) increased business volume due to the recent two-carrier procurement, the level loading of COLUMBIA follow ships, and an increase to two VCS per year in all but one COLUMBIA authorization years (two VCS per year was accounted for in the COLUMBIA and FORD Class reactor plant government furnished equipment budget requests).</p>

Total Electronics		482.551		546.354		294.239
Remarks:						
The program identified cost efficiencies in the Electronics category to support the award of the Block V MYP contract. The overall cost efficiencies from the FY 2020 President's Budget request to FY 2021 President's Budget request are carried through all future program years. Additionally, the Electronics profile fluctuation (FY19-21) reflects improved alignment of non-recurring engineering support to physically and electronically integrate the pre-planned NPES TI-24 Tech Insertion configuration change and various phased Undersea Dominance payloads.						
The FY 2021 President's Budget request includes AP/EOQ funds to procure LLTM to maintain a 2 per year construction cadence for material buys and support in-yard need dates for the option for a 10th ship that may be exercised in FY21, FY22, or FY23. If the 10th ship option is not exercised, this material would be assigned to subsequent SSNs.

<b>Exhibit P-8a, Analysis of Ship Cost Estimates:</b> PB 2021 Navy					<b>Date:</b> February 2020	
<b>Appropriation / Budget Activity / Budget Sub Activity:</b> 1611N / 02 / 1			<b>P-1 Line Item Number / Title:</b> 2013 / Virginia Class Submarine			
Hull, Mechanical, and Electrical (HM&E)	FY 2019		FY 2020		FY 2021	
	Qty (Each)	Total Cost (\$ M)	Qty (Each)	Total Cost (\$ M)	Qty (Each)	Total Cost (\$ M)
<b>P-35 Items</b>						
Propulsor	2	79.434	2	81.022	1	66.128
<b>P-35 Items Subtotal</b>		<b>79.434</b>		<b>81.022</b>		<b>66.128</b>
<b>Major Items</b>						
CSA MK2		3.364		3.432		1.750
<b>Major Items Subtotal</b>		<b>3.364</b>		<b>3.432</b>		<b>1.750</b>
<b>Other Cost Elements</b>						
HM&E Installation and testing		19.892		20.290		10.348
T&E		14.084		18.838		9.608
SUPSHIP responsible material		2.254		2.300		1.173
<b>Other Cost Elements Subtotal</b>		<b>36.230</b>		<b>41.428</b>		<b>21.129</b>
<b>Total Hull, Mechanical, and Electrical (HM&amp;E)</b>		<b>119.028</b>		<b>125.882</b>		<b>89.007</b>

**Remarks:**

The profile for T&E reflects the VPM variation; FY19 has 2 ships, one with VPM. FY20 has two ships with VPM. FY21 has one ship with VPM. T&E for VPM ships reflect additional requirement. A VPM ship adds (4) additional payload tubes compared to Block III/IV. The requirements for Peculiar Support Equipment (PSE) / Special Support Equipment (SSE) delivered with each ship increase from (2) All Up Round Simulators (AURS) and (10) All Up Round Ballast, Grade B (AURBb) to (6) AURS and (34) AURBb. This support equipment is required to be delivered with each ship in order to support testing for the VA Payload Tubes when they are not loaded with ordnance.

The FY 2021 President's Budget request includes AP/EOQ funds to procure LLTM to maintain a 2 per year construction cadence for material buys and support in-yard need dates for the option for a 10th ship that may be exercised in FY21, FY22, or FY23. If the 10th ship option is not exercised, this material would be assigned to subsequent SSNs.

**Description:**  
The VIRGINIA Class Command, Control, Communications and Intelligence (C3I) System is the electronics suite which will provide required operational and warfighting capability for the Navy's newest attack submarine. The C3I System includes 15 subsystems (23 if all electronically interfaced subsystems are included) integrated by an overarching Architecture Subsystem. This P-35 covers the procurement requirements for the following: C3I Prime Contractor Furnished Equipment (Sonar, Combat Control and Architecture subsystems) and associated Government Furnished Equipment; technical data documentation; spares; technical engineering services; design engineering services; field engineering services; management support services; and shipboard certification efforts.

**Contract Data:**

Program Year	Hull	Prime Contractor	Contract Method/Type	Award Date	New/Option	Quantity (Each)	Unit Cost (\$ M)
FY 2019	SSN 802	Lockheed Martin	C/CPIF	Jan 2019	New	2	49.870
FY 2020	SSN 804	Lockheed Martin	C/CPIF	Jan 2020	Option	2	50.867
FY 2021	SSN 806	Lockheed Martin	C/CPIF	Jan 2021	Option	1	51.884

**Delivery Date:**

Program Year	Hull	Earliest Ship Delivery Date	Months Required Before Delivery	Production Leadtime	Required Award Date
FY 2019	SSN 802	Jun 2025	26	32	Aug 2020
FY 2020	SSN 804	Oct 2026	26	32	Dec 2021
FY 2021	SSN 806	Aug 2027	26	32	Oct 2022

**Competition/Second Source Initiatives:**  
N/A

**Remarks:**  
Remarks: The Sonar, Combat Control & Architecture P-35 exhibit includes funding for multiple subsystems, contracts and field activities. However, the unit cost in the contract data section reflects only the major contract, Sonar acoustics processing.

Other Costs - The program identified cost efficiencies in the Electronics category to support the award of the Block V MYP contract. The overall cost efficiencies from the FY 2020 President's Budget request to the FY 2021 President's Budget request are carried through all future program years. Additionally, the Electronics profile fluctuation (FY19-21) reflects improved alignment of non-recurring engineering support to physically and electronically integrate the pre-planned NPES TI-24 Tech Insertion configuration change and various phased Undersea Dominance payloads.

The profile for electronics in FY21 includes AP/EOQ funds to procure LLTM to support in-yard need dates should the option for a 10th ship be exercised in either FY21, FY22, or FY23. If the 10th ship option is not exercised, this material would be assigned to subsequent SSNs.

**Description:**  
 The VIRGINIA Class Command, Control, Communications and Intelligence (C3I) System is the electronics suite which will provide required operational and warfighting capability for the Navy's newest attack submarine. The C3I System includes 15 subsystems (23 if all electronically interfaced subsystems are included) integrated by an overarching Architecture Subsystem. This P-35 covers the procurement requirements for the following: Modular Mast Prime Contractor Furnished Equipment; technical data documentation; spares; systems engineering; technical engineering services; management support services; shipboard certification; and maintenance of technical data efforts. This system consists of eight common masts for purposes of housing, raising and lowering antenna and other sensor units.

**Contract Data:**

Program Year	Hull	Prime Contractor	Contract Method/Type	Award Date	New/Option	Quantity (Each)	Unit Cost (\$ M)
FY 2019	SSN 802	L3 KEO	SS/FP	Apr 2019	Option	2	8.595
FY 2020	SSN 804	L3 KEO	SS/FP	Apr 2020	New	2	8.767
FY 2021	SSN 806	L3 KEO	SS/FP	Apr 2021	Option	1	8.951

**Delivery Date:**

Program Year	Hull	Earliest Ship Delivery Date	Months Required Before Delivery	Production Leadtime	Required Award Date
FY 2019	SSN 802	Jun 2025	37	21	Aug 2020
FY 2020	SSN 804	Oct 2026	37	21	Dec 2021
FY 2021	SSN 806	Aug 2027	37	21	Oct 2022

**Competition/Second Source Initiatives:**  
N/A

**Remarks:**  
 Other Costs - The program identified cost efficiencies in the Electronics category to support the award of the Block V MYP contract. The overall cost efficiencies from the FY 2020 President's Budget request to the FY 2021 President's Budget request are carried through all future program years. Additionally, the Electronics profile fluctuation (FY19-21) reflects improved alignment of non-recurring engineering support to physically and electronically integrate the pre-planned NPES TI-24 Tech Insertion configuration change and various phased Undersea Dominance payloads.

The profile for electronics in FY21 includes AP/EOQ funds to procure LLTM to support in-yard need dates should the option for a 10th ship be exercised in either FY21, FY22, or FY23. If the 10th ship option is not exercised, this material would be assigned to subsequent SSNs.

**Description:**

The VIRGINIA Class Command, Control, Communications and Intelligence (C3I) System is the electronics suite which will provide required operational and warfighting capability for the Navy's newest attack submarine. The C3I System includes 15 subsystems (23 if all electronically interfaced subsystems are included) integrated by an overarching Architecture Subsystem. Exterior Communications Systems (ECS) is an integration effort with multiple Government-Off-The-Shelf (GOTS) components providing the core ECS capability. The GOTS components of ECS will be provided using existing contracts. This P-35 covers the procurement requirements for the following: ECS GOTS equipment; fabrication/production; systems engineering; system test & evaluation; training; data; technical engineering services; spares and repair parts; and program management. This system provides the capability for seamless, transparent, secure connectivity for information exchange between submarine users and the Global Command and Communications System (GCCS).

**Description:**  
The propulsor consists of Ni-Al-bronze blades and a large steel and inconel fabrication piece. The purpose of the propulsor is to generate proper thrust to propel the ship at a rated speed within the approved limits of torque and shaft RPM, while at the same time meeting acoustic and structural requirements. This design is unique to the VIRGINIA Class. The propulsor consists of a large quantity of government supplied material and a contract for the fixed portion construction and assembly.

**Contract Data:**

Program Year	Hull	Prime Contractor	Contract Method/Type	Award Date	New/Option	Quantity (Each)	Unit Cost (\$ M)

**Description:**

\*Note: "When Required" is the number of months required before ship delivery.

**Footnotes:**

<sup>(1)</sup> Reactor Plant Equipment Advance Procurement is required to fund long-lead time propulsion plant equipment, which is the longest lead-time equipment required for construction of nuclear-powered attack submarines, and ensure production capability that supports projected production quantities. To support the VIRGINIA Class' innovative and more efficient modular construction method, reactor plant components must be delivered earlier in the construction process than previous submarine classes. Under the new method, the VIRGINIA Class reactor plant is assembled and tested before being mounted and installed in the hull. The FY 2021 President's Budget request reflects an out-year cost reduction of VIRGINIA Class Submarine (VCS) nuclear propulsion equipment. Two areas of cost reduction include: (1) risk reduction associated with successful plant criticality of the first Virginia Forward Fit nuclear reactor core in PCU VERMONT (792), and (2) increased business volume due to the recent two-carrier procurement, the level loading of COLUMBIA follow ships, and an increase to two VCS per year in all but one COLUMBIA authorization years (two VCS per year was accounted for in the COLUMBIA and FORD Class reactor plant government furnished equipment budget requests). The reduction to 1 shipset of reactor plant GFE in FY21 and its impact to the nuclear industrial base is under evaluation.

**UNCLASSIFIED**

<b>Exhibit P-10, Advance Procurement Requirements Analysis (page 2 - Budget Funding Justification):</b> PB 2021 Navy		<b>Date:</b> February 2020
<b>Appropriation / Budget Activity / Budget Sub Activity:</b> 1611N / 02 / 1		<b>P-1 Line Item Number / Title:</b> 2013 / Virginia Class Submarine
<p>(2) Electronics Equipment AP is required to fund the long-lead time material for the Command and Control System Module (CCSM). AP for the CCSM plays a critical role in early system installation and test in order to keep the CCSM out of the critical path to ship delivery and minimize risk to ship construction. AP is required to procure selected electronics and associated pre-cable kits, cabling, connector plates and mechanical structures to be installed in this module in accordance with Shipyard Required in Yard Dates (RIYD). Pre-cable kits allow the shipyard to establish cable runs and checkout platform interfaces prior to electronics installation. Mechanical structures establish footprint unique packaging to allow electronics to install efficiently. Additionally, this 1 YR AP is for long lead items such as metal fabrication parts (mechanical structures, chassis, drawer slides, mounting hardware), power supplies and cable connectors, subcontract items (Aft Sonar Receive Unit), and acoustic hull sensors (such as DT-574 LAB Hydrophones).</p> <p>(3) Non-Nuclear Propulsion Plant Equipment Propulsor AP is required to satisfy in-yard need dates for ship delivery. Other prior year non-nuclear propulsion plant equipment has been negotiated as CFE in the Construction Contract.</p> <p>(4) Long Lead-Time CFE AP is required to fund long lead time contractor furnished material including the Weapons Handling and Reactor Plant Modules and the Main Propulsion Unit (MPU)/Ship Service Turbine Generator (SSTG). Additionally VPM LLTM CFE in FY19 - FY25 required to support the increased material procurement (i.e. electrical, valves, flanges, fittings, pipe, fabricated parts, hardware, and tools, etc.) associated with the increased VPM workload and to maintain anticipated ship construction schedules is included. These and other components are required early in the construction phase to meet the delivery schedule. The one and two year CFE includes essential funding to support the Block V LLTM that has been negotiated into the MYP Construction Contract (not inflation driven due to VPM fluctuation and cadence of vendor base procurements) in combination with the EOQ profile to maximize cost savings and meet in yard need dates of materials.</p> <p>(5) EOQ is for Economic Order Quantity for large lot procurements of shipbuilder material and major Government Furnished Equipment to achieve MYP savings. Examples of shipbuilder large lot procurements include items such as Electrical (cable, wire, fittings, switches, instrumentation, connectors, resistors, etc.); Valves, flanges and fittings, piping; Fabricated Parts (bearings, sound isolation mounts, pipe hanged assemblies, machined parts); Hardware and Tools (fasteners, marine fittings, locks, latches, small tools). Examples of GFE large lot procurements include items such as: Sonar - Large Aperture Bow (LAB) Arrays and associated bottles, Light Weight Wide Aperture Array (LWWAA) Receivers &amp; electronic components (network servers, switches) ECS - High Data Rate (HDR) Antennas, Digital Modular Radios (DMRs) &amp; associated power amplifiers, Navy Multiband Terminals (NMTs), and Multifunction Masts (MFM)s OE-538. ESM - Photonics ESM Performance Improvement (PEPI)-3 systems and Multifunctional Modular Masts (MMMs) Photonics Masts - outboard equipment only, such as Diploops along with complex electronic &amp; mechanical components that are required to manufacture the Photonics masts.</p>

**Description:**

To support and operate aircraft to engage in attacks on targets afloat and ashore which threaten our use of the sea and to engage in sustained operations in support of other forces. The refueling of the reactors and repair and upgrade of the main propulsion equipment will provide for reliable operations during its remaining 23 plus years of ship life using only the normal maintenance cycle.

<p><b>Justification:</b>  FY 2021 CVN RCOH profile now includes CVN 75 RCOH starting in FY 2025 with five years of advance procurement from FY 2020 to FY 2024 and one year of subsequent full funding in FY 2026.</p> <p>FY 2021 is the second of three years of full funding for CVN 74. The CVN 74 RCOH funding profile was revised at the FY 2020 President's Budget request to four years of advance procurement from FY 2016 to FY 2019 and three years of full funding from FY 2020 to FY 2022, which is similar to CVN 73 RCOH profile.</p> <p>FY 2021 includes \$198.0M of completion of prior year shipbuilding programs funding for CVN 73. This includes \$158.2M for shipyard contract cost overrun and crew berthing cost increases. This also includes support to incorporate MQ-25 into the CVN 73 (\$11.8M) increases in C4ISR costs (\$17.8M), SSDS cost increases (\$3.2M), Node Room Ripout/Install cost increases (\$4.9M), and Combat Systems Support Center Ripout/Install cost increases (\$2.1M).</p> <p>Previously appropriated OPN represents reactor power units procured for CVN 74-76 RCOHs. Funding was included with the end cost per Section 1018 of the 2019 National Defense Authorization Act.</p>

Net P-1 Funding		637.625		634.626
<b>Remarks:</b> The \$0.583M decrease for CVN 73 in Plans from the FY 2020 President's Budget request reflects realized savings from contract close-out de-obligations. The \$2.465M increase for CVN 74 in Plans from the FY 2020 President's Budget request is due to an unplanned design studies for integrating new combat system equipment (EASR, SPN-50, SEWIP, etc.). The Norfolk Naval Shipyard (NNSY) Planning Yard contract re-compete resulted in higher labor rates and a shift from NNSY resources to contractor. Additional resources were required for Ship's Force work package planning due to overlap of CVN 73 and CVN 74 hulls (the prior plan assumed shared resources).  The \$206.150M increase for CVN 73 in Basic Construction from the FY 2020 President's Budget request is to provide for the shipyard contract cost overrun and four-month schedule shift for a December 2021 re-delivery.

Exhibit P-5c, Ship Cost Analysis: PB 2021 Navy		Date: February 2020
Appropriation / Budget Activity / Budget Sub Activity: 1611N / 02 / 1		P-1 Line Item Number / Title: 2086 / CVN Refueling Overhauls
<p>CVN 74 \$4.908M increase in propulsion equipment from the FY 2020 President's Budget request is due to a modification to a major propulsion plant component, manufacturing spares, material for infrastructure installation, and corresponding technical services.</p> <p>Non-nuclear government furnished equipment (GFE) is captured in Electronics, HM&amp;E, and Ordnance. The GFE Governance Program was initiated to target soft costs by punctiliously challenging performers to achieve savings in program management, system engineering, and logistics support. Procurement details are recorded in NAVSEA Form 7300s and reviewed annually to refine and adjust estimates for required products and services to the most current data available. The \$20.000M increase for CVN 74 in HM&amp;E from the FY 2020 President's Budget request is to provide operator ballistic protection for crew served weapons stations as required in the Department of Defense Appropriations Act, 2020.</p> <p>The \$8.000M increase for CVN 73 in Other Cost from the FY 2020 President's Budget request is due to the increase in negotiated rates for crew berthing.</p>

<b>Exhibit P-8a, Analysis of Ship Cost Estimates:</b> PB 2021 Navy		<b>Date:</b> February 2020
<b>Appropriation / Budget Activity / Budget Sub Activity:</b> 1611N / 02 / 1		<b>P-1 Line Item Number / Title:</b> 2086 / CVN Refueling Overhauls
<p>AN/SLQ-32A(V)4 - ELECTRONIC WARFARE SUITE: CVN 73 cost increase (\$3.882M) from the FY 2020 President's Budget request for Electronic Counter Measure (ECM) Room No 2 infrastructure and outfitting (HVAC, lighting, paint, insulation, decking) additional scope. Replaced by Surface Electronic Warfare Improvement Program (SEWIP) Block 2 onboard CVN 74 (listed under Ordnance P-35 items).</p> <p>AN/SPN-43C REFURBISHMENT: Replaced by AN/SPN-50(V)1 Air Traffic Control Radar onboard CVN 74.</p> <p>NAVAL STRIKE WARFARE PLANNING CENTER (NSWPC): CVN 74 cost increase from the FY 2020 President's Budget request (\$1.931M) and from CVN 73 (\$2.369M) is due to incorporation of additional Ready Room modernization and collaborative conferencing equipment technology refresh not required for CVN 73.</p> <p>AN/UPX-29 - IDENTIFICATION FRIEND OR FOE (IFF) INTERROGATOR SET: CVN 73 cost increase (\$1.031M) from the FY 2020 President's Budget request due to the poor condition of the GFE upon removal and inspection, resulting in additional refurbishment and testing efforts. CVN 74 cost increase (\$1.497M) from the FY 2020 President's Budget request is due to the required relocation of the IFF equipment room to make space for the installation of the new main mast.</p> <p>AN/TPX-42(V)15 UPGRADE: CVN 73 cost reduction (\$0.353M) from the FY 2020 President's Budget request due to efficiencies gained in the GFE Governance Program. CVN 74 RCOH is receiving AN/SYY-1 Air Traffic Control System instead of AN/TPX-42(V)15 refurbishment.</p> <p>AN/SYY-1 - AIR TRAFFIC CONTROL SYSTEM: New display system that replaces AN/TPX-42(V)15 onboard CVN 74.</p> <p>CVN 73 RCOH Other Cost Elements includes eight unlisted systems, each under \$1 million in major hardware requirement. CVN 74 RCOH Other Cost Elements includes seven unlisted systems, each under \$1 million in major hardware requirement. CVN 73 increase from the FY 2020 President's Budget request is to support a full test &amp; certification program required to re-deliver the ship. CVN 74 RCOH increase from the FY 2020 President's Budget request is due in part to adding the Common Munitions &amp; Bit/Reprogramming (CMBRE) system.</p>

Other Cost Elements Subtotal		88.324		98.476
Total Hull, Mechanical, and Electrical (HM&E)		168.260		180.226
Remarks: NODE ROOM RIPOUT/INSTALL: CVN 73 cost increase (\$4.843M) from the FY 2020 President's Budget request due to completion of detailed drawings and provision of the basis of estimate (BOE) from the contractor. Original estimates were based on the work scope from previous availabilities. CVN 74 cost increase (\$4.809M) from the FY 2020 President's Budget request to reflect actual cost incurred on CVN 73.  COMBAT SYSTEMS SUPPORT CENTER (CSSC) RIPOUT/INSTALL: CVN 73 cost increase (\$2.119M) from the FY 2020 President's Budget request due to completion of detailed drawings and provision of the basis of estimate (BOE) from the contractor. Original estimates were based on the work scope from previous availabilities. CVN 74 increase (\$2.094M) from the FY 2020 President's Budget request to reflect actual cost incurred on CVN 73.				

**UNCLASSIFIED**

<b>Exhibit P-8a, Analysis of Ship Cost Estimates: PB 2021 Navy</b>		<b>Date:</b> February 2020
<b>Appropriation / Budget Activity / Budget Sub Activity:</b> 1611N / 02 / 1		<b>P-1 Line Item Number / Title:</b> 2086 / CVN Refueling Overhauls
<p>COMBI-OVENS: CVN 73 cost increase (\$3.275M) from the FY 2020 President's Budget request due to hardware unit cost increase upon negotiated price with vendor. Combi-ovens already installed on CVN 74 and not a requirement.</p> <p>LAUNDRY DRYERS: CVN 73 cost increase (\$1.560M) from the FY 2020 President's Budget request due to added groom and maintenance required for poor as-arrived material condition.</p> <p>AFT CREW MESS: CVN 73 cost increase (\$0.284M) from the FY 2020 President's Budget request due to actual incurred cost for AIT. CVN 74 reduced cost (\$0.083M) from the FY 2020 President's Budget request is due to efficiencies gained in program management and engineering support gained through the GFE Governance Program.</p> <p>CARRIER INTELLIGENCE CENTER (CVIC) RIPOUT/INSTALL: CVN 73 cost decrease (\$0.547M) from the FY 2020 President's Budget request due to completion of detailed drawings and provision of the basis of estimate (BOE) from the contractor. Original estimates were based on the work scope from previous availabilities. CVN 74 decrease (\$0.639M) from the FY 2020 President's Budget request to reflect actual cost incurred on CVN 73.</p> <p>MEDICAL AND DENTAL SUITE: CVN 73 cost increase (\$0.123M) and CVN 74 cost increase (\$0.397M) from the FY 2020 President's Budget request due to increased price of Authorized Medical and Dental Allowance Lists (AMAL/ADAL) items by vendor.</p> <p>MODULAR REFRIGERATION UNIT (MRU): New modernization added to CVN 68 class aircraft carriers. New MRUs correct longstanding obsolescence issues and will provide reduced life cycle maintenance and repair costs.</p> <p>OPERATOR BALLISTIC PROTECTION FOR CREW SERVED WEAPONS STATIONS: New modernization added to CVN 74 at the direction of the Department of Defense Appropriations Act, 2020. The modernization will provide ballistic shielding protection around exposed common served weapons stations.</p> <p>ENGINEERING, TEST &amp; CERTIFICATION: Engineering funds a lean team of subject matter expert engineers to diagnose issues and provide solutions at a lower cost point to mitigate risk of cost and scope creep at the shipyard. CVN 73 increase of \$3.553M from the FY 2020 President's Budget request is to support a full test &amp; certification program required to re-deliver the ship. CVN 74 decrease of \$5.963M is due to cost efficiencies from shared CVN 73 and CVN 74 resources and updated engineering support long-term projections.</p> <p>MISCELLANEOUS GOVERNMENT FURNISHED EQUIPMENT (GFE): The CVN 73 RCOH includes twenty-eight unlisted systems, each under \$1 million in major hardware requirement. The CVN 74 RCOH includes twenty unlisted systems, each under \$1 million in major hardware requirement. CVN 74 decrease of \$2.211M from the FY 2020 President's Budget request is the result of cost efficiencies realized through the GFE Governance Program and the shifting of GFE Ship Machinery Opening (SMO) hole cuts to end-use work.</p>

Total Ordnance		126.840		230.107
Remarks: CVN 74 RCOH Ordnance increase from CVN 73 RCOH includes \$86.500M for Enterprise Air Surveillance Radar (EASR), CIWS/RAM Defense Capability (CRDC) Block 1, and Surface Electronic Warfare Improvement Program (SEWIP) Block 2. EASR replaces AN/SPS-48 and AN/SPS-49 Air Search Radars. CRDC replaces Phalanx MK 15 MOD 22 (CIWS). SEWIP replaces AN/SLQ-32A(V)4 Electronic Warfare Suite.  COMBAT DIRECTION CENTER (CDC)/FLAG RIPOUT/INSTALL: CVN 73 increased to reflect the actual cost of the Painting, Insulation, and Decking (PID) drawing. CVN 74 increase (\$5.617M) adjusted to reflect actuals on CVN 73 as effort will be nearly identical.  AN/SQQ-34C - CARRIER TACTICAL SUPPORT CENTER: CVN 74 increase (\$1.325M) from CVN 73 accounts for a full (with GFE) installation onboard CVN 74. CVN 73 is an infrastructure-only installation (no GFE).  RAM GUIDED MISSILE LAUNCHING SYSTEM: CVN 74 increase from CVN 73 by \$1.343M due to procurement of new hardware. CVN 73 hardware was obtained from decommissioned assets and refurbished. Additional decommissioned hardware assets are not available for CVN 74 and all new hardware is required.

Exhibit P-8a, Analysis of Ship Cost Estimates: PB 2021 Navy		Date: February 2020
Appropriation / Budget Activity / Budget Sub Activity: 1611N / 02 / 1		P-1 Line Item Number / Title: 2086 / CVN Refueling Overhauls
<p>MK 53 DECOY LAUNCHING SYSTEM (DLS): CVN 73 is a removal, refurbishment, and re-installation effort. CVN 74 requires procurement of all new equipment. CVN 74 decrease from the FY 2020 President's Budget request due to hardware bulk buy cost savings.</p> <p>CVN 73 RCOH Other Cost Elements includes five unlisted systems, each under \$1 million in major hardware requirement. CVN 74 RCOH Other Cost Elements includes five unlisted systems, each under \$1 million in major hardware requirement. CVN 74 cost increase (\$1.770M) from the FY 2020 President's Budget request is due to separating Phalanx MK 15 MOD 22 (CIWS) from CRDC, which is a P-35 item.</p>

**Description:**  
Provides an integrated communications infrastructure to support both tactical and non-tactical applications in all warfare and support areas, an improved shipboard RF distribution system and multiband antennas, and capabilities for the control and monitoring of RF assets introducing network automation and provide interoperable communications for joint operations. It will interconnect forces of the Battle Group (BG)/ Amphibious Readiness Group (ARG) and connects the BG/ARG with expeditionary forces and the Commander-in-Chief Command Complex (CCC) ashore crossing all available media including Ultra High Frequency (UHF), Super High Frequency (SHF), Extremely High Frequency (EHF), commercial satellite links, and new medium-to-high data rate HF and UHF line of sight (LOS) links. C4ISR includes RCS, weather, navigational, signal exploitation, and command and control equipment.

FY 2020	CVN 74	Jan 2025	0		Various

**Competition/Second Source Initiatives:**  
N/A

**Remarks:**  
CVN 73 RCOH - Comprised of 36 discreetly funded line items. Overall increase due to additional work scope required to complete the C4ISR Install (\$17.742M). Detailed design ship installation drawings levied additional requirements to install significant electrical power, HVAC, and structural infrastructure that was not originally estimated. CANES is the primary driver of the increase. New work is required to support the ship's communications and networking capabilities and return the ship to a Forward Deployed Navy Asset status. CVN 73 is the first hull to significantly increase the use of government installation teams for GFE vice HII-NNS installation teams during RCOH. Technical engineering services costs in P-35 exhibits appear higher than previous hulls because these costs were categorized as Basic Construction in the P-5 exhibit when the work was performed by the shipbuilder, HII-NNS. Government installation teams are approximately 25% less costly and are an overall cost savings to the program.

<b>Description:</b> The Integrated Communication Network consists of the following systems: An Integrated Communications System (ICS) that provides the ship's Internal Command and Control Communications. In addition, ICS provides connectivity to other onboard systems such as Announcing Systems, Sound Powered Circuits, Secure / Non Secure off-ship Communications, Shipboard Air Traffic Control Communications (SATCC) and Hierarchical Yet Dynamically Reprogrammable Architecture (HYDRA). The Machinery Control Monitoring System (MCMS) controls and monitors approximately 3500 machinery signals for various HM&E auxiliary systems (e.g. JP5, firemain, IC/SM panels) for aircraft carriers. It utilizes the Machinery Control Network (MCN) for signals. The MCN is the core network that provides communication services and transport for the MCMS system and part of the backbone that rides over the Fiber Optic Cable Plant (FOCP). It consists of five network switches, associated racks, and cabling. The Navigation Critical Distribution System (NAVCRT) is a switched network providing communication services and transport for the NAV Standard Message, which is originated in the Naval Sensor System Interface (NAVSSI) system. The NAVCRIT Distribution consists of three backbone switches and eight I/O controllers to convert digital NAV data for analog outputs. It will use the FOCP to the maximum extent for connectivity. The Ship Control System (SCS) provides control and display of rudder position, Engine and Propeller Order Telegraph functions. SCS provides data for heading, speed, and rudder angles through NAVCRIT Network from NAVSSI. The SCS interfaces to an Electronic Chart Display Information System. Shipboard Multipurpose Copiers includes the acquisition and installation of Class III Copier/Printer (B&W), Class III Color Copier/Printer, Class IV Copier/Printer (B&W) and Class IV Color Copier/Printer. The related equipment is for use on surface vessels in the US Navy as part of the Shipboard Multipurpose Copier Program.

Other Costs		0.400		0.400			
<b>Total</b>	<b>1</b>	<b>36.969</b>	<b>1</b>	<b>36.981</b>			
<b>Description:</b> The Electronic Consolidated Automated Support System (eCASS) provides repair capability for aircraft instruments, components ("black boxes"), subcomponents (e.g. circuit cards), avionics and missile systems for all current deployable aircraft, F/A-18 ATFLIR (Forward Looking Infrared Receiver) and ALQ-99 (electronic jamming) systems, as well as new and future aircraft such as E-2D and F-35C. The eCASS replaces the obsolete Consolidated Automated Support System (CASS) that formerly provided this support. The eCASS suite provides expeditious, on-site repair capability for more than 1,100 different components, without which parts support for the ship's AIRWING (which routinely operates at great distances from logistics supply points) would be degraded to the point that it would result in increased support costs and negatively affect mission accomplishment, combat readiness, and required sortie generation rates.

<b>Description:</b> The Joint Precision Approach and Landing System (JPALS) is the future precision approach and landing system which will be the primary landing system for the Joint Strike Fighter (F-35B/F-35C), Unmanned Carrier Aviation Air System (MQ-25A), and future aircraft platforms onboard CVNs and LHA/LHD type ships. JPALS is the Navy certified sea-based system to have the capabilities necessary to provide ship range/bearing for JPALS-equipped aircraft operating within 200NM; provide air traffic control surveillance of JPALS-equipped aircraft via secure, two-way data link with the ship; and support auto-land functionality for the F-35C, MQ-25A, and future platforms to CVNs. JPALS is critical for MQ-25A as currently no secondary landing system exists for MQ-25A operations at sea.

**Description:**  
AN/USG-2B - Cooperative Engagement Capability (CEC) provides Battle Force Anti-Air Warfare (AAW) capability by coordinating all force AAW sensors into a single real time, fire control quality composite track picture. CEC distributes sensor measurement data from each Cooperating Unit (CU) to all other CUs. Each CU has a Data Distribution System (DDS) and a Cooperative Engagement Processor (CEP). The DDS encodes and distributes ownship sensor and engagement data to other CUs, and receives and decodes other CU's data. The CEP processes ownship data and DDS supplied remote sensor and weapon data needed to provide the common air picture.

**Contract Data:**

Program Year	Hull	Prime Contractor	Contract Method/Type	Award Date	New/Option	Quantity (Each)	Unit Cost (\$ M)
FY 2016	CVN 73	Raytheon/Sechan	C/FFP	Jan 2016	Option	1	3.503
FY 2020	CVN 74	Seaport-e	C/IDIQ	Oct 2020	Option	1	4.973

**Delivery Date:**

Program Year	Hull	Earliest Ship Delivery Date	Months Required Before Delivery	Production Leadtime	Required Award Date
FY 2016	CVN 73	Dec 2021	38	18	Apr 2017
FY 2020	CVN 74	Jan 2025	24	18	Jul 2021

**Competition/Second Source Initiatives:**  
N/A

**Remarks:**  
CVN 73 RCOH - Overall decrease from the FY 2020 President's Budget request is a result of realized savings from the GFE Governance Program to reduce program management, system engineering, and logistics support.

CVN 74 RCOH - System engineering increase from the FY 2020 President's Budget request due to incorporation of new estimate for post-installation testing requirements (\$2.446M). Increases from CVN 73 in hardware and other costs are due to upgrade of antennas from PAO-cooled (polyalphaolefin, a liquid coolant) to air-cooled aboard CVN 74 to address obsolescence and maintainability issues.

<b>Description:</b> The AN/SPN-41 Aircraft Approach Control Transmitting Set provides all-weather instrument approach guidance from the ship to the aircraft. It is used as the ship's Instrument Landing System (ILS) and Monitor to provide azimuth and elevation alignment information to landing aircraft on final approach to the deck. It also serves as an independent monitor of other shipboard landing systems for the pilot as well as providing a backup landing guidance option. AN/SPN-41 enhances safety of flight during recovery, enables the execution of all-weather air combat operations, and is required to achieve full air traffic control certification following RCOH. AN/SPN-41 is required to be removed during the RCOH to prevent damage and allow for major infrastructure recapitalization and reconfiguration of the ship's island, mast, and tower.

<b>Total</b>	<b>1</b>	<b>14.480</b>	<b>0</b>	<b>-</b>			
<b>Description:</b> Aircraft Electrical Service Station (AESS) supports the F-35 Joint Strike Fighter (JSF) and JUCAS electrical requirements. They require 270VDC electrical power for maintenance and pre-flight operations. This type of power is not currently available on CVN 68 class aircraft carriers. This ship alteration will equip CVN 68 class ships with a dual purpose AESS station providing either: 90KVA of 115VAC, 400Hz, power for the Advanced Hawkeye (E-2D), and all legacy aircraft, or 70KW of 270VDC electrical power for the JSF (F-35) and JUCAS. This upgrade will replace the obsolete components now part of the AESS with a quiet, lightweight, low-cost, dual-purpose system that decreases maintenance costs and improves habitability.

<b>Competition/Second Source Initiatives:</b> N/A																							
<b>Remarks:</b> CVN 73 received Oxygen Nitrogen Generator (O2N2) refurbishment during RCOH. CVN 74 increased costs (\$0.180M) from the FY 2020 President's Budget request is due to unit cost increase of the O2 generator increasing (\$0.240M) with a reduction in vendor service fees (\$0.060M).

**Description:**  
Provides procurement, engineering and logistics support for launch and recovery equipment (includes overhaul/replacement of catapult launch valves and arresting gear engines), ADMACS (Aviation Data Management and Control System Phase II upgrade; includes Cyber Security requirement and future aircraft ready), Moriah Wind System, ILARTS (Integrated Launch and Recovery TV Surveillance System; includes Technical Refresh Service Change to mitigate obsolescence issues), mission pods, Jet Blast Deflectors (includes Service Change to provide side panel cooling to meet JSF requirements), aviation maintenance facility, weapons compatibility, aircraft spotting, aviation servicing facilities, Landing Signal Officer Display System (LSODS; includes ADMACS interfacing and Cyber Security updates), Long Range Lineup System (LRLS), Improved Fresnel Lens Optical Landing System (IFLOLS; includes Phase IV upgrade), Manually Operated Visual Landing Aid System (MOVLAS) and Flight Deck Lighting and Marking and Lighting. All of these systems are required to be repaired, updated, overhauled as required and tested during RCOH to attain final Flight Deck Certification authorizing launch and recovery of USN aircraft.

**Contract Data:**

Program Year	Hull	Prime Contractor	Contract Method/Type	Award Date	New/Option	Quantity (Each)	Unit Cost (\$ M)
FY 2016	CVN 73	Various	Various	Various	Various	1	28.620
FY 2020	CVN 74	Various	Various	Various	Various	1	38.266

**Delivery Date:**

Program Year	Hull	Earliest Ship Delivery Date	Months Required Before Delivery	Production Leadtime	Required Award Date
FY 2016	CVN 73	Dec 2021	0		Various
FY 2020	CVN 74	Jan 2025	0		Various

**Competition/Second Source Initiatives:**  
N/A

**Remarks:**  
CVN 73 RCOH - Overall decrease from the FY 2020 President's Budget request is a result of realized savings across the AE&S portfolio of 18 distinct systems from the GFE Governance Program to reduce program management, system engineering, and logistics support.

CVN 74 RCOH - Increased costs from the FY 2020 President's Budget request (\$8.301M) is due to revised hardware costs for Recovery to include CVN 74 condition findings during open & inspect. CVN 74 requires overhaul of additional crosshead and fixed sheaves and an additional engine new-build, which are not required on the CVN 73.

<b>Delivery Date:</b>							
<b>Program Year</b>	<b>Hull</b>	<b>Earliest Ship Delivery Date</b>	<b>Months Required Before Delivery</b>	<b>Production Leadtime</b>	<b>Required Award Date</b>		
FY 2020	CVN 74	Jan 2025	24	24	Jan 2021		
<b>Competition/Second Source Initiatives:</b> N/A							
<b>Remarks:</b> CIWS/RAM Defense Capability (CRDC) Block 1 is a significant enhancement of Phalanx MK 15 MOD 22 (CIWS). On CVN 73, infrastructure-only efforts (no GFE hardware) have been added since the FY 2020 President's Budget request. On CVN 74, the decrease from the FY 2020 President's Budget request is due to separating CIWS from CRDC into an Ordnance other cost element. CVN 74 increase from CVN 73 by \$18.949M due to procurement of CRDC GFE. CVN 74 includes a refurbishment of Phalanx MK 15 MOD 22 and procurement and installation of CRDC equipment.

**Description:**  
FY 2021 is the second of five years of advance procurement for CVN 75 RCOH. Full funding begins in FY 2025 with one years of subsequent full funding in FY 2026. FY 2021 resumes the required advance procurement funding profile to support a May 2025 start date.

Plans: Efforts include advance planning engineering support; authorized work package (AWP) development; shipchecks and shipcheck oversight; government furnished information (GFI) development; and technical oversight and authority.

Basic: Efforts include prime contractor advance planning; integration of the AWP into the execution integrated master schedule; Ship's Force work package material procurement; and technical support.

Propulsion Equipment: Nuclear component procurement and technical support services.

\*Note: "When Required" is the number of months required before ship delivery.

**Description:**

DDG 1000, a multi-mission surface combatant will serve as a versatile asset in the context of future Naval Strategy. Armed with an array of weapons, DDG 1000 will provide the Joint Force Commander with precision strike and volume fires. Designed with sustainable payload, multi-spectral stealth and optimal manning, DDG 1000 will take the fight to the enemy with unprecedented striking power, sustainability, survivability and information dominance. FY21 funding will support DDG 1002 combat availability and mission systems activation.

<b>Description:</b> EXCOMMs are part of the DDG 1000 C3I Segment and consists of a set of seven (7) external communications elements. The EXCOMM Elements support the DDG 1000 system in achieving its mission by providing communications between DDG 1000 and other land, air, and sea based platforms as well as pier-side communications. These EXCOMM elements provide the voice, data, and video communications between DDG 1000 and the external world at sea as well as when in port. The 7 elements are: Satellite Communications (SATCOMs), Line of Sight (LOS), Common Data Link-Navy (CDL-N), Information Security (INFOSEC), Common Array Element (CAE), Cooperative Engagement Capability (CEC) and Integrated Communications Controller Software (ICCS). Government legacy systems include: Distributed Common Ground System, Navy (DCGS-N), Cooperative Engagement Capability (CEC), Communication Terminals, AN/WSC-6(V)9 Shipboard Terminal, Common Link Integrated Processor (CLIP), Automated Digital Network System (ADNS), Global Broadcast Service (GBS), Communications Data Link System (CDLS), & Naval Modular Automated Communications System (NAVMACS).

<b>Description:</b> The IUSW suite supports DDG 1000 in achieving Undersea and Surface Dominance with the capability to detect and track hostile surface vessels, submarines, and moored volume mines. It supports the Sensor Systems Segment in accomplishing its Integrated Air and Surface Dominance (IASD) and Integrated Undersea Dominance (IUSD) objectives by providing the capability to conduct Anti-Submarine Warfare (ASW), Torpedo Defense (TD) and Mine Warfare (MIW) missions. Military Operations Other than War (MOOTW) objectives, such as Search and Rescue (SAR) (locating downed aircraft and vessels in the ocean) are also supported. There are four major subcomponents: Bow Array Component, Towed Array Component, Towed Torpedo Countermeasures Component, as well as software.

<b>Description:</b> The Common Array Cooling System (CACS) provides liquid cooling for the Multi Function Radar (MFR) and External Communications (EXCOMMs) arrays. CACS is a distributed cooling system consisting of three Cooling Equipment Units (CEUs). Each CEU operates an independent coolant loop used to transport, monitor and control coolant flow to the DBR and EXCOMMs Equipment. CEUs consist of redundant pumps, a heat exchanger and filtration system. It is designed to provide liquid coolant to the MFR and EXCOMM equipment and dissipate heat to the ship-supplied chilled water.

<b>Description:</b> The Flight 1 Ship Control System (SCS) element is a system of hardware and software items that provide hierarchical and integrated ship control by the DDG 1000 crew. The SCS software architecture allows for various levels of automation for monitoring, control, reporting and configuration of SCS equipment and operations to support mission and low manning concepts. From workstation positions on the ship bridge or in the ship mission centers, the SCS coordinates, controls and monitors the navigation, hull, electric plant, machinery plant and damage control functions on the DDG 1000.

<b>Total</b>	<b>2</b>	<b>16.025</b>	<b>1</b>	<b>7.800</b>			
<b>Description:</b> Cooperative Engagement Capability (CEC) is a sensor network with Integrated Fire Control capability that significantly improves Battle Force air and missile defense capabilities by coordinating measurement data from Battle Force air search sensors on CEC-equipped units into a single, real-time, composite cooperating unit (CU), to all other CUs in the Battle Force through a real-time, line of sight, high data rate sensor and engagement data distribution network. CEC is highly resistant to jamming and provides accurate grid locking (relative spatial positioning) between CUs. Each CU independently employs high capacity, parallel processing and advanced algorithms to combine all distributed sensor data into a high quality track picture that is the same for all CUs. CEC data is presented as a superset of the best air and missile defense sensor capabilities from each CU, all of which are integrated into a single input to each CU's combat weapon system. CEC significantly improves Battle Force defense in depth, including both local and area defense capabilities against current and future air missile threats.

<b>Description:</b> The MK 57 VLS is a general purpose, operationally unmanned launching system capable of stowing, preparing, and launching missiles in support of DDG-1000 mission areas including: land attack warfare, integrated air and surface dominance, and integrated undersea dominance. The MK57 VLS provides the capability for rapid launch of missiles into a 360-degree hemispherical volume above and about the ship. The canistered missiles are stowed within the launching systems below-deck cells. DDG-1000 will have 80 total cells grouped into 20 four-cell modules. Flight 1 missiles to be carried include: Enhanced Sea Sparrow Missile (ESSM), Standard Missile-2 (SM-2) Blk III, Tomahawk Land Attack Missile (TLAM) Blk III/IV, and Vertical Launch Anti-Submarine Rocket (VLA).

<b>Description:</b> The Main Turbine Generator Set (MTG) shall be capable of being utilized as the prime power source on the DDG 1000 Destroyer for electrical power applications (propulsion, ship services, and combat systems loads). The DDG 1000 baseline includes two MTGs. The minimum output power from each MTG shall be 35.25 MWe. The engine utilizes a Full Authority Digital Control Local Operating Panel (FADC LOCOP) and electric start system. The generator contains redundant automatic voltage regulators (AVR) with automatic changeover.

<b>Description:</b> The Advanced Gun System is a fully automated, single barrel, 155mm, vertically loaded, stabilized gun mount that is capable of storing, initializing/programming, loading and firing projectiles and propelling charges. Its primary mission is Land Attack Warfare in support of ground and expeditionary forces beyond the Line of Sight in the DDG 1000 system's littoral engagement area where precise, rapid-response, high-volume, long-range fire support is required. Each DDG 1000 will carry two complete AGS systems - Mount 61 and 62. The above deck configurations are identical but each has a slightly different below deck configuration.

<b>Description:</b> The Close-In Gun System (CIGS) supports the DDG 1000 system in achieving Integrated Air and Surface Dominance with the capability to neutralize hostile surface vessels and aircraft at short ranges. CIGS also supports the Military Operations Other than War (MOOTW) missions, such as performing maritime interdiction, conducting maritime law enforcement, and supporting hostage rescue. Two (2) CIGS will be mounted on the aft end of the hanger. The CIGS MK 46 MOD 2 GWS is composed of a turret assembly that houses the MK 44 MOD 2 cannon and an advanced Fire Control System that includes a ballistic solution computer, an electro-optical sensor package, and an eye-safe laser range finder. The system uses a forward-looking infrared sensor, a low-light television camera, and eye safe laser range finder with a closed-loop tracking system to optimize accuracy against small, high-speed surface targets. The system can be operated locally from the gun control station inside the turret, remotely from the MK 46 MOD 2 GWS Remote Gun Station Operator (RGSO) panel in the Combat Information Center (CIC), or manually using hand cranks from inside the turret. The 30mm cannon, MK 44 MOD 2, is a single barrel, open bolt, dual feed, electrically powered, chain-driven automatic cannon. The system has a magazine capacity of 424 rounds, a dual-feed capability with a firing rate of 200 rounds per minute, and is capable of selectively switching between ammunition types and firing modes.

**Description:**

DDG 51 will be able to operate offensively and defensively, independently or as units of Carrier Strike Groups and Surface Action Groups, in support of Marine Amphibious Task Forces in multi-threat environments that include air, surface and subsurface threats. These ships will respond to Low Intensity Conflict/Coastal and Littoral Offshore Warfare (LIC/CALOW) scenarios as well as open ocean conflict providing or augmenting power projection and forward presence requirements, and escort operations at sea. Beginning in FY17, DDG 51 Flight III with the Air and Missile Defense Radar (SPY-6) will significantly enhance Integrated Air and Missile Defense capability against current and future threats. Starting in FY21, Bridge System Upgrades will be incorporated for improved navigation capability. Starting in FY22, Surface Electronic Warfare Improvement Program (SEWIP) Block 3 will provide Electronic Attack (EA) capability improvements against current and future threats.

**Description:**  
Gigabit Ethernet Data Multiplex System (GEDMS) is the mission critical ship-wide network that transfers data associated with Machinery, Steering, Navigation, Combat, Alarms & Indicating, and Damage Control Systems. It is a general purpose modular data transfer system that provides high speed, reliable and survivable data from source systems to user systems automatically or on demand.

<b>Description:</b> The UPX-29 Interrogator System is a centralized Mark XIIA interrogator and target processor. It employs a cooperative challenge and reply technique to positively identify friendly platforms. The system is capable of interrogating Mark XII, Mark XIIA, International Civil Aviation Organization (ICAO), or Federal Aviation Administration (FAA)-compliant IFF transponders using a standard shipboard interrogator set, a target processor, and an Electronically Steerable Antenna (ESA) system. TACAN is a navigational beacon system that provides azimuth, slant range, and station identification information to TACAN equipped aircraft, permitting 24/7, all weather landing operations.

**Description:**

The contractor will engineer, manufacture, test and deliver a fully operational DDG 51 Main Reduction Gear (MRG). A DDG 51 Class MRG shipset consists of two gear assemblies. Each reduction gear combines the input of two LM2500 engines to convert the high speed, low torque of the engine to low speed, high torque output suitable to drive the propulsion shafting, and the related support systems and equipment.

<b>Description:</b> AEGIS is a fast reaction, high firepower, all weather weapon system incorporating a high degree of system availability and effectiveness. It consists of a multi-function phase/plane array radar, high powered illuminators, advanced missile guidance and fully digitalized and integrated combat ship control for radar, weapons and command and decision. An Operational Readiness Test System performs continuous on-line assessment and fault detection.

**Description:**  
 The AN/SPY-6 Air and Missile Defense Radar (AMDR) suite consists of an S-Band radar (AMDR-S), an X-band radar (via SPQ-9B starting with DDG 119), and a Radar Suite Controller (RSC). AMDR will provide multi-mission capabilities, simultaneously supporting both long range, exoatmospheric detection, tracking and discrimination of ballistic missiles, as well as Area and Self Defense against air and surface threats.

**Description:**

Phalanx Close-In Weapon System (CIWS) provides fast reaction terminal defense against anti-ship missiles, aircraft, helicopters, low-slow flyers (e.g. unmanned aerial vehicles) and surface threats. The system is an automatic, self-contained unit consisting of search/track radar, threat evaluation and fire control subsystem, and a 20 mm M61A1 Gatling gun subsystem all mounted in a single structure requiring a minimum of integration with other ship systems.

<b>Exhibit P-10, Advance Procurement Requirements Analysis (page 2 - Budget Funding Justification):</b> PB 2021 Navy		<b>Date:</b> February 2020
<b>Appropriation / Budget Activity / Budget Sub Activity:</b> 1611N / 02 / 1		<b>P-1 Line Item Number / Title:</b> 2122 / DDG-51
<p><b>Description:</b> AP is required for shipbuilder Economic Order Quantity procurements for material items to achieve savings under the FY18-22 MYP and FY23-27 planned/projected MYP contracts and for VLS procurements. Reflects FY19 Congressional Addition of \$250 million for FY20 third ship. FY19 \$250M is divided into shipbuilder EOQ, VLS, and MRG procurements. Reflects FY20 Congressional Addition of \$390M for long lead time material (LLTM) for FY21 ship(s) Reflects FY20 Congressional Addition of \$130M for the Surface Combatant Supplier Base. FY21 AP funds support LLTM procurement and procurement of Government Furnished Equipment (GFE) systems (EXCOMM and SRQ-4) for FY22 ships prior to expiration of current contract vehicles in FY21. This procurement strategy for the GFE systems enables consistent system configurations, avoids shipbuilder change impacts, and also avoids projected system cost growth for the DDG 51 program.</p> <p>The FY19 column for the Ship Construction EOQ FY22 Ships is overstated by \$51.0M as this exhibit does not include the FY19 rescission of DDG-51 AP from the Department of Defense Appropriations Act, 2020.</p> <p>*Note: "When Required" is the number of months required before ship delivery.</p>

<b>Description:</b> Provides for the design, construction, integration, and testing of the Littoral Combat Ship (LCS) including ordnance, government furnished equipment (GFE), plans and change order costs.  LCS: Operates with focused-mission packages that deploy manned and unmanned vehicles to execute a variety of missions, including anti-submarine warfare (ASW), surface warfare (SUW), and mine countermeasures (MCM). LCS also possesses inherent capabilities, regardless of the mission package installed, including intelligence, surveillance, and reconnaissance (ISR), anti-terrorism/force protection (AT/FP), air warfare self-defense, joint littoral mobility, and logistic support for movement of personnel and supplies. LCS SUW ships will also include maritime interdiction/interception operations (MIO). This relatively small, shallow-draft, high-speed surface combatant complements the U.S. Navy's Surface Fleet by operating in environments where it is impossible or undesirable to employ larger deeper-draft, multi-mission ships. LCS can deploy independently to overseas littoral regions or remain on station for extended periods of time either with a battle group or through a forward-basing arrangement. LCS will operate with Carrier Strike Groups, Surface Action Groups, or independently as dictated by the mission and environment. Additionally, LCS can operate cooperatively with the U.S. Coast Guard and Allies.

**Description:**  
 The Guided Missile Frigate (FFG(X)) is a more lethal and survivable multi-mission small surface combatant. In FY 2014, the Navy established the requirements for a lethal and survivable small surface combatant ship (designated as Frigate (FF)), above that of Littoral Combat Ship (LCS), to meet future missions. Based upon the Navy's 2016 Force Structure Assessment resulting in validation of the need for 52 small surface combatants and the need to address increasingly complex threats in the global maritime environment, the Navy reassessed the capabilities required to ensure the Frigate paces future threats. The updated assessment was completed to support establishment of top-level FFG(X) requirements in Summer 2017 and resulted in a Navy approved Capability Development Document (CDD). The CDD was JROC approved in Feb 2019. With FFG(X), the Navy will maximize the small surface combatant capabilities in the Anti-Surface Warfare (SUW), Anti-Submarine Warfare (ASW), Electromagnetic Maneuver Warfare (EMW), Air Warfare (AW) mission areas, and survivability while keeping the ship affordable and as a part of a "high-low" mix of surface ships. The FFG(X) program completed Gate 5 in June 2019 and a Component Cost Position (CCP) in January 2020, and will continue to refine the cost estimates to support a FY 2020 Detail Design and Construction (DD&C) contract award.

Net P-1 Funding		1,281.177		1,053.123
<div>Remarks:</div> <div>The changes from FY 2020 President's Budget request to the FY 2021 request are driven by the adjusted ship procurement profile (1,2,2,2,2,2 to 1,1,1,2,2,3), which causes variation in BCC and GFE equipment areas due to the loss of quantity. The program has also completed a Component Cost Position (CCP), which has driven variation.</div>

**Description:**  
 The AEGIS Weapon System (AWS, formerly Frigate Weapon System (FWS)) is an integrated combat management system that provides doctrine, management, control, and display functionality for FFG(X) Combat System (FCS) missions as well as command and control functionality for all warfare areas. The AWS comprises: Command and Decision (C&D) System, Combat System Computing Infrastructure (CSCI), Shipboard Gridlock System/Automatic Correlation (SGS/AC), AEGIS Display System (ADS), Weapons Control System (WCS), Operational Readiness Training System (ORTS), Mission Planner (MP), Vehicle Control Domain (VCD), and resource management for the Enterprise Air Surveillance Radar.

FY20 cost decreases are due to receiving updated cost estimates, and contract alignment with the support activities and other shipbuilding programs.

**Contract Data:**

Program Year	Hull	Prime Contractor	Contract Method/Type	Award Date	New/Option	Quantity <i>(Each)</i>	Unit Cost <i>(\$ M)</i>
FY 2020	FFG 1	TBD	C/FFP	TBD		1	14.413
FY 2021	FFG 2	TBD	C/FFP	TBD		1	13.729

**Delivery Date:**

Program Year	Hull	Earliest Ship Delivery Date	Months Required Before Delivery	Production Leadtime	Required Award Date
FY 2020	FFG 1	Jul 2026	40	24	Mar 2021
FY 2021	FFG 2	Oct 2026	40	24	Jun 2021

**Competition/Second Source Initiatives:**  
 AWS will be procured under the competitive combat system contract run by IWS 1.0 with award in FY 2021.

**Remarks:**  
 Other costs represent the system integration and test for the entire combat system (not just the AWS).

The change from FWS to AEGIS CS Frigate baseline occurred to align with AEGIS Baseline 10 (BL 10). The Frigate AWS is an AEGIS BL 10 derivative.

<p><b>Description:</b></p> <p>The LPD 17 Flight II is expected to functionally replace LSD-41 Class ships and LSD-49 Class ships for embark, transport, control, insert, sustainment, and extract of Marine Air-Ground Task Force elements and supporting forces by helicopters, landing craft, and amphibious vehicles. Program is on track to support FY27 retirement of LSDs.</p> <p>The FY 2018 Defense Appropriations Act authorized the procurement of LPD 30. Per signed Acquisition Decision Memorandum, LPD 17 Flight II will meet the Capabilities Development Document for LX(R) and shall subsume all previous LX(R) efforts. LPD 30 will be the first ship of LPD 17 Flight II.</p>

## UNCLASSIFIED

Exhibit P-8a, Analysis of Ship Cost Estimates: PB 2021 Navy			Date: February 2020	
Appropriation / Budget Activity / Budget Sub Activity: 1611N / 03 / 1		P-1 Line Item Number / Title: 3010 / LPD Flight II		
Ordnance	FY 2018		FY 2021	
	Qty (Each)	Total Cost (\$ M)	Qty (Each)	Total Cost (\$ M)
P-35 Items				
RAM BLOCK II		20.511		21.766
MK 46 GUN		8.350		8.861
AN/SPQ-9B Radar Set		6.571		6.974
EASR		32.976		34.994
P-35 Items Subtotal		68.408		72.595
Major Items				
ASGSI/HOSS/MWS Fit Control & Inst Land Sys		3.252		3.451
ORDNANCE HANDLING EQUIPMENT		0.423		0.449
Next Generation Surface Search Radar (NGSSR)		2.758		2.927
Major Items Subtotal		6.433		6.827
Other Cost Elements				
MISCELLANEOUS ORDNANCE		9.035		16.599
Other Cost Elements Subtotal		9.035		16.599
Total Ordnance		83.876		96.021

**Remarks:**

Increase in Miscellaneous Ordnance reflects the need for additional class cost on LPD 31 as the Navy transitions from Flight I to Flight II. LPD 30 had a relatively low class cost requirement as the first ship in Flight II.

<p><b>Description:</b></p> <p>The Expeditionary Mobile Base (ESB) (formerly MLP Afloat Forward Staging Base (AFSB)) will serve as a dedicated Naval Afloat Forward Staging Base, optimized to support naval assets in a variety of missions rather than independently modifying ships-of-opportunity as required to meet these roles. The ESB retains sealift capabilities inherent to the Class through cargo transportation and distribution, but provides enhanced aviation, berthing, small boat handling, and command and control capabilities to meet a broader mission set. The ESB provides the Combatant Commanders flexibility to respond to immediate threats and host task organized forces, including Airborne Mine Countermeasures and Special Forces to confront irregular challenges and counter-terrorism. This includes enhanced logistics and UNREP capability (receive only) and C4I capability to support future missions.</p> <p>Note:</p> <p>1) The amounts in the Prior Years column includes the NDSF MPF,F MLP BLI 00401 Procurement Costs for Expeditionary Transport Dock (ESD) 1, ESD 2, and ESB 3 as well as SCN BLI 3039 for the ESB 4, 5, and 6.</p> <p>2) The Outfitting and Post Delivery amounts in the Prior Years column represent NDSF BLI 5000 for ESD 1, ESD 2, and ESB 3 as well as SCN BLI 5110 for the ESB 4 and 5.</p>

<b>Description:</b> C4ISR items consist of equipment which is in a containerized environment for secure storage and operation of ship's C2 equipment (Next Generation Wideband Communications, SMIS, (classified and unclassified networks). Additional cryptographic equipment above the equipment provided with SMIS, Military radios to provide VHF, UHF Line of Site, and UHF SATCOM, Commercial Broadband Satellite Program (CBSP) for wideband SATCOM to provide voice and data communications to the shore. A Navy network consisting of a rack of electronic boxes that will provide NIPRNET, SIPRNET and CENTRIX plus additional hardware and software to support Military Detachment functions, laptops and printers to outfit several added spaces supporting embarked units: briefing room, tactical operations center, planning room, intel room, training center and communication room. The infrastructure to support installation of a HF radio.

**Description:**

The LHA(R) Program replaces the Tarawa Class (LHA 1) Amphibious Assault Ships and the retiring Wasp Class (LHD 1) Amphibious Assault Class Ships. The LHA(R) class program ensures that the Amphibious Fleet remains capable of Expeditionary Warfare well into the 21st Century and provide for an affordable and sustainable amphibious ship development program. Provides forward presence and power projection as an integral part of joint, interagency, and multinational maritime expeditionary forces. Operates for sustained periods in transit to and operations in an Amphibious Objective Area to include the embarkation, deployment, and landing of a Marine Landing Force and supporting forces by helicopters and tilt rotors supported by Joint Strike Fighters F-35B.

LHA(R) Flight 0 is considered a transitional increment intended to increase the aviation capabilities of amphibious assault ships. The LHA(R) Flight 1 design continues the incremental development of amphibious assault ships by adding a well deck, and increasing flight deck capacity by reducing the footprint of the island and adding a sponson. LHA(R) Flight 0 consisted of two ships, LHA 6 and LHA 7. LHA(R) Flight 1 is the second increment in the LHA 6 Class with LHA 8 being the first ship of Flight 1. The Flight 1 ships maintain an aviation centric capability with the addition of a well deck that will accommodate two Landing Craft, Air Cushions. LHA 9 provided Advance Procurement funds in FY 2019. FY20 NDAA and Appropriations Bill provided incremental funding authority and the first increment of Full Funding. FY23 and FY24 provide the remaining LHA 9 Full Funding to complete construction of the ship.

Exhibit P-8a, Analysis of Ship Cost Estimates: PB 2021 Navy		Date: February 2020
Appropriation / Budget Activity / Budget Sub Activity: 1611N / 03 / 1		P-1 Line Item Number / Title: 3041 / LHA Replacement
<p><b>Remarks:</b> For LHA(R) Flight 1 ships:</p> <p>- Enterprise Air Surveillance Radar (EASR) suite will be a modern, long-range, three-dimensional (3-D) radar used to search, detect and provide space-stabilized, three-coordinate (range, bearing, height) data for air intercept control and designation to a weapon system and Air Traffic Control (ATC) system. The LHA(R) Flight 1 configuration includes a rotating antenna array, below decks radar and cooling equipment. The EASR suite replaces the SPS 48/49 air-search radar systems. AN/SPS-48 air search radars have not been in production for several years. All existing AN/SPS-48 radars are installed on operational Fleet ships. Without the EASR suite, LHA(R) Flight 1 ships will not have an air-search radar for self-defense and airspace deconfliction.</p> <p>- AN/SPN-50 Shipboard Air Traffic Radar (SATR) system provides aircraft position, radar signal and radar data. Air traffic controllers use the data for aircraft sequencing and separation, airspace identification and containment, safety alerts, traffic advisories and landing guidance. AN/SPN-50 SATR replaces the AN/SPN 43C SATR. EASR and AN/SPN-50 are designed to be integrated systems whereas EASR and AN/SPN 43C are not as compatible.</p> <p>- The dual mast antenna configuration Cooperative Engagement Transmission Processing Set (CETPS) replaces the single mast CETPS. The CETPS dual mast antenna configuration improves the compatibility with AN/SPN-50 and allows the ship to maintain 360-degree data link coverage and full combat systems capability.</p>

<b>Description:</b> SEWIP Block 2 is a scalable Electronic Warfare enterprise suite to provide improved Electromagnetic Interference (EMI) mitigation and Combat System Interface capabilities to select new construction ships as well as upgrade current AN/SLQ-32(V)3 and (V)4 Electronic Warfare (EW) suites on existing ships. It provides enhanced shipboard Electronic Warfare (EW) for early detection, analysis, threat warning and protection from anti-ship missiles. SEWIP Block 2 focused on Electronic Support (ES) capability improvements.

<b>Description:</b> The Joint Precision Approach Landing System (JPALS) works with the GPS satellite navigation system to provide accurate, reliable and high-integrity guidance for F-35 and future JPALS equipped aircraft. The system features anti-jam protection to ensure mission continuity in hostile environments. JPALS is a differential GPS that will provide an adverse weather precision approach and landing capability.

<b>Description:</b> Identification Friend or Foe (IFF) is an approved and fully supported centralized Mark XII Interrogator system. It uses one receiver transmitter that synchronizes video with up to four radar sweeps. It supplies synthetic video (symbology) to, and accepts requests from, as many as 22 remote locations. It provides digital target reporting to the combat systems/weapon systems computer via full scan, sector, and/or pop-up interrogations. It provides instantaneous target reporting at requested range and azimuth through the use of an electronically-steered Antenna Group OE-120/UPX or OE-120A/UPX.

<b>Description:</b> The Vertical/Stationary Take-Off Landing (VSTOL) Optical Landing System is a visual landing aid that displays glide path and trend information to the VSTOL pilot preparing to land on ship. The system can guide an aircraft to the ship from a distance of 0.8 nautical miles. The OLS guides the aircraft to 50 feet above the flight deck up to the final approach phase.

**Description:**

Future joint forces will be responsive, deployable, agile, versatile, lethal, survivable, and sustainable. The nation will need lift assets that can provide for assured access, decrease predictability and dwell time, and have the capacity to quickly deliver troops and equipment together in a manner that provides for unit integrity. Expeditionary Fast Transport (EPF) (formerly Joint High Speed Vessel) will provide combatant commanders high-speed intra-theater sealift with inherent cargo handling capability and the agility to achieve positional advantage over operational distances. Not limited to major ports, the EPF will be able to operate in austere port environments. EPFs 14-15 will have modifications to conduct a Role 2 Enhanced (R2E) Medical Transport mission which will include enhanced medical capabilities to support embarked Medical Military Detachment (MILDET) teams while retaining the ability to perform high-speed intra-theater sealift.

**Description:**  
T-AO 205 John Lewis Fleet Oiler Class will recapitalize the existing T-AO 187 fleet oiler class. The Navy's Combat Logistics Force (CLF) oilers supply fuel and dry cargo to Navy ships at sea. The T-AO Class will operate as shuttle ships from resupply posts to customer ships. Additionally, in conjunction with a T-AKE, they will accompany and stay on-station with a Carrier Strike Group (CSG) to provide fuel as required to customer ships.

**Characteristics:**

<b>T-AO</b>	
Length Overall	746 ft
Beam	106 ft
Displacement	22,515 MT (Lightship)
Draft	33.5 ft (Design)

**Description:**  
The Radio Communication System (RCS) consists of the subsystems that provide data and voice communications across the RF spectrum. The RCS will be comprised of subsystems provided from various sources, including SPAWAR Program of Record systems, commercial systems, and associated ancillary equipment that can be obtained through the stock system and bought commercially. These subsystems will be integrated into one system and will include the automated and manual patching equipment required to configure these subsystems. The subsystems included in the RCS include the High Frequency 400 Watt System, Digital Modular Radio (DMR) VHF/UHF Line of Sight and UHF SATCOM voice, Naval Modular Automated Communications System (NAVMACS) Naval Messaging System, Battle Force Tactical Network (BFTN), Tactical Variant Switch (TVS), Tactical Voice Terminal (TVT), Automated Digital Networks System (ADNS), Commercial Broadband Satellite Program (CBSP), Fleet Broadcast, Navy Order wire (NOW) Terminals, OE-570A/WSC UHF SATCOM Antenna, Portable Communications Equipment (PCE) and Cryptologic equipment. The subsystems are integrated by SPAWAR Systems Center Atlantic at the Charleston, SC Test and Integration Facility with the proper interfaces to operate as an overall system. The RCS subsystems and interfaces will be tested prior to shipment for installation on board the T-AO ships.

**Contract Data:**

Program Year	Hull	Prime Contractor	Contract Method/Type	Award Date	New/Option	Quantity (Each)	Unit Cost (\$ M)
FY 2019	T-AO 207	TBD	TBD	TBD		2	1.232
FY 2020	T-AO 209	TBD	TBD	TBD		2	1.257

**Delivery Date:**

Program Year	Hull	Earliest Ship Delivery Date	Months Required Before Delivery	Production Leadtime	Required Award Date
FY 2019	T-AO 207	Dec 2022	7	14	Mar 2021
FY 2020	T-AO 209	Apr 2024	7	14	Jul 2022

**Competition/Second Source Initiatives:**

**Description:**

The Navy requires ocean-going towing, salvage, and rescue capabilities to support Fleet operations. The Navy's current capabilities are provided by four T-ATF 166 Class Fleet tugs and four T-ARS 50 Class salvage ships which will reach the end of their expected service lives beginning in 2020 and 2025, respectively. The Towing, Salvage and Rescue Ships (T-ATS 6 Navajo Class) will recapitalize the current Fleet tugs and salvage ships with a common hull that is capable of performing the missions of the retiring T-ATF and T-ARS classes.

**Description:**  
 The Landing Craft, Utility (LCU) 1700 program provides heavy lift capability to transport personnel, weapons, equipment, and cargo from the ship to shore and shore to shore across the range of military operations (ROMO). LCU 1700 will be able to conduct 24 hours/day operations for up to 10 days for continuous landing of troops, equipment, and supplies; provide support for missions requiring persistence such as riverine sustainment, surveillance or port clearing; and execute missions to reinforce, reposition, and resupply forces over a wide operating area.

LCU 1700 provides the functional replacement for the LCU 1610 class of landing craft, all of which have significantly exceeded their 25 year service life, the average age is approaching 50 years old.

LCU 1700 requirement is for 32 craft.

Note:  
 Notional Characteristics based on Government Preliminary Design.  
 Production Status dates provided are based on awarded contract delivery dates.

<b>Total Ship Estimate</b>		<b>33.980</b>		<b>41.520</b>		<b>83.670</b>		<b>87.395</b>
<b>Net P-1 Funding</b>		<b>33.980</b>		<b>41.520</b>		<b>83.670</b>		<b>87.395</b>

**Remarks:**

Beginning in FY 2021, Basic Construction pricing is based off contractor Firm-Fix Pricing.

FY 2016 electronics funding includes non-recurring engineering costs.

The FY 2021 increase in Other Cost is due to additional SUPSHIP resources to provide on-site Navy personnel for oversight, testing and quality assurance inspections in order to ensure the Program remains on schedule and within budget. In FY 2021, the shipbuilder is anticipated to have seven craft under construction, with the delivery of the first LCU 1700 Class craft of the Program.

<p><b>Description:</b></p> <p>Outfitting (OF) funds are used to acquire on board repair parts, other secondary items, equipage, recreation items, precommissioning crew support and general use consumables furnished to the shipbuilder or the fitting-out activity to fill the ship's initial allowances as defined by the baseline coordinated shipboard allowance list (COSAL). The program also budgets for contractor-furnished spares, a lead-time away from delivery. The program ensures operational readiness of ships undergoing new construction, conversion, service life extension program (SLEP), and nuclear refueling. It ensures these ships receive their full allowances of spare parts and equipment which are vitally required to support the shipboard maintenance process; ensures ships are equipped with operating space items (tools, test equipment, damage control), personnel safety and survivability commodities for successful completion of builder sea trials; supports shipboard maintenance and thereby achieving the OPNAV-directed supply readiness goals for material on board ship at delivery. SCN funding for the initial fill of allowance list items are limited to those items on the COSAL and authorized requirements through the Obligation Work Limiting Date (OWLD). While most outfitting funds are executed prior to ships' completion of fitting out dates, some outfitting funding may be required in the fiscal year following the scheduled Delivery Date.</p> <p>Post Delivery (PD) funding covers the repair of government-responsible items which were believed to have been complete to standard and/or operable at delivery, as well as funding to conduct tests and trials after delivery.</p> <p>It is essential to deliver to the Fleet complete ships, free from both contractor and government responsible deficiencies, capable of supporting the Navy's mission. The Post Shakedown Availability (PSA) is a shipyard availability assigned to commence after delivery and to be completed prior to the expiration of the SCN OWLD. It is during this time that acceptance and final contract trials deficiencies will be corrected. The purpose of the PSA is to correct new construction deficiencies found during the shakedown period; to correct contractor and government responsible deficiencies previously authorized; and accomplishment of other improvements or class items as authorized. Funding is used for corrections authorized by the ship's Program Manager as a result of builders' trials (pre-delivery), acceptance or underway trials, final contract trials, trial board items, and correction of production-related defects or deficiencies which develop during the post delivery period. Although the majority of post delivery funding occurs after ships' delivery dates, some funding is required prior to the delivery date in preparation for post delivery events.</p> <p>First Destination Transportation (FDT). FDT delivers material from a procurement source to the first point of use or storage which may be in the Continental United States or overseas. The procurement source may be a supplier outside of the Department of Defense (DoD) supply system or a DoD activity which fabricates new material. FDT also includes transportation from point of origin to point of use or storage when Navy-owned material or equipment is provided to a contractor incident to a Research and Development project or a system/equipment acquisition or modification.</p>

**Description:**

The Ship to Shore Connector (SSC) program provides the capability to rapidly move assault forces within the littoral operational environment to accomplish Unified Command Plan (UCP) missions and ensures the Joint Force Commander's (JFCDR's) ability to conduct amphibious operations and operate over the high water mark, including movement over ice, mud, rivers, swamps and marshes. SSC provides the functional replacement for the Landing Craft, Air Cushion (LCAC) Class of ships, which began reaching extended service life in 2015.

The Department of Defense Appropriations Act, 2015 directed that the Department complete LCAC 101 in the Shipbuilding and Conversion, Navy Appropriation. LCAC 101 is partially financed with \$23.7M of FY 13/FY 14 R&D funding.

## Description:

The US Navy owns/operates approximately 366 Service Craft consisting of 36 different classes of craft at 56 different commands and activities throughout the world. Service Craft provide critical support to carriers, submarines, and other Navy vessels through port operations and ship maintenance. Nearly half of the Service Craft inventory is over 40 years of age. The Service Craft budget supports the acquisition and procurement of replacement craft as follows:

Auxiliary Floating Dry Dock Medium (AFDM) is utilized to dry dock surface ships and submarines (including CG, DDG, LCS, LSD, and SSN) in order to perform maintenance availabilities.

Auxiliary Personnel Lighters - Small (APL(S)) provide crew messing, duty crew berthing, and administrative training spaces to ships and improve the quality-of-life for sailors during CNO maintenance availabilities.

Harbor Tugs (YT) provide port operations towing, mooring, docking, undocking and escort of submarines, aircraft carriers, and other Navy vessels.

Small Harbor Tugs (YT(L)) are utilized by port operations for ship assist, towing, and escort of smaller Navy ships and craft.

Fuel Oil Barges (YON) carry petroleum products for refueling ships.

Waste Oil Barges (YWO) support the offload of waste oil from ships and transport for processing.

Covered Lighters (YFN) transport ordnance, equipment and cargo which must be protected from weather.

Open Lighters (YC) transport cargo/equipment and serve as a work platform for ship maintenance.

Repair, Berthing and Messing Barges (YRBM) provide crew messing, duty crew berthing, and administrative spaces for small to mid-size ships and submarines during CNO maintenance availabilities.

<b><u>Classification of Cost Estimate:</u></b>																																																	
<p><b>Justification:</b> One (1) Auxiliary Floating Dry Dock Medium (AFDM) is required to execute scheduled ship maintenance availabilities at Naval Base San Diego due to a shortage of available dry docks in the region.</p> <p>Auxiliary Personnel Lighters - Small (APL(S)) barracks craft provide critical berthing and messing facilities for sailors while their ships are in port for availabilities and Inter-Deployment Training Cycles (IDTC). Even when the home port ashore initiative is fully implemented, berthing barges will still be required to meet the original mission of providing berthing for duty crews and messing, training, and office space for the entire crew per OPNAVINST 4700.38B. Thirteen (13) of the seventeen (17) APLs in service were built from 1944-1946; they do not meet current safety standards, are not dual gender-compatible and lack modern communication capabilities. The APL program replaces outdated and dilapidated transport ships and will greatly improve our sailors' quality of life, improve safety during availabilities and save the Navy a significant amount of money over the life of the program.</p> <p>Harbor Tugs (YT) provide critical vessel docking/undocking, towing, escort, personnel transfer, and emergency services to carriers, ships, and submarines. The YT program replaces aging YTB tugboats in the Northwest Region, Yokosuka, and Portsmouth Naval Shipyard and is required to meet mission requirements.</p> <p>Fuel Oil Barges (YON) will greatly reduce the risk of a major fuel oil spill. Many existing YONs are 50 to 60 years old and of single hull construction. The new YONs will be double-hulled and will meet the requirements of the Oil Pollution Act of 1990 (OPA-90).</p> <p>Waste Oil Barges (YWO) will be double-hulled and have piping and other systems specifically designed for transferring oily waste. The YWO program will replace 66 to 78 years old barges being used to transport oily waste and in extremely poor condition.</p> <p>Open Lighter (YC) and Covered Lighter (YFN) barges are required to replace the oldest YC and YFN in the Fleet, which are over 50 years old and have become unaffordable to overhaul.</p> <p>Repair, Berthing and Messing Barges (YRBM) will replace barges that were built in the 1940s; they do not meet current safety standards, are not dual gender-compatible and lack modern communication capabilities.</p>

Cost Categories	FY 2017		FY 2021	
	Qty (Each)	Total Cost (\$ M)	Qty (Each)	Total Cost (\$ M)
Plan Costs	3		3	
Basic Construction/Conversion		35.925		30.216
Electronics		6.542		2.225
Hull, Mechanical, and Electrical (HM&E)		33.850		17.515
Other Cost		3.983		6.505
<b>Total Ship Estimate</b>		<b>80.300</b>		<b>56.461</b>
<b>Net P-1 Funding</b>		<b>80.300</b>		<b>56.461</b>

**Remarks:**

FY17 is the last year of LCAC SLEP and FY21 is the first year of LCAC E-SLEP. LCAC E-SLEPs are structured to cost effectively gain more service life out of existing legacy LCACs.

Description: Note: General Provision Section 8073 of the Department of Defense Appropriations Act, 2020 directs that funds appropriated for the Completion of Prior Year Shipbuilding Programs be merged with and available for the same purposes as the appropriation to which transferred.  [P5 / [2001] CVN - Carrier Replacement]: Funds in FY 2021 are for completion of mission essential requirements to include Advanced Weapons Elevator (AWE) construction and certification, advanced degaussing corrections and resolution of outstanding trial cards on CVN 78 (\$71.0M).  [P5 / [2086] CVN RCOH]: Funds in FY 2021 are to finance CVN 73 cost increases on C4I Equipment (\$17.8M), Ship Self Defense System (\$3.2M), Node Room ripout/installation (\$4.9M), Combat Systems Support Center ripout/installation (\$2.1M), and to incorporate the MQ-25 into CVN 73 as mandated by the FY 2019 National Defense Authorization Act (\$11.8M). Funds in FY 2021 are also to finance the Government responsible portion of the shipbuilding construction contract overrun for CVN 73 RCOH (\$158.2M).  [P5 / [2122] DDG-51]: Funds in FY 2021 are for the Government responsible portion of the shipbuilding construction contract overrun for DDG 121/DDG 122 (\$9.6M).

**Description:**

The FY 2018 Omnibus Appropriations Act included a Congressional add for Detail Design and Construction (DD&C) efforts for one T-AGS 60 vessel. T-AGS 67 is a repeat platform of T-AGS 66 and includes the Moon Pool Launch and Recovery System (MLARS). The TAGS 67 will be capable of deep ocean and coastal surveys, oceanographic sampling and data collections of surface, midwater and ocean floor parameters, shipboard oceanographic data processing and sample analysis, and operation of remotely operated vehicles (AUVs) and hydrographic survey launches (HSLs).

  

**Characteristics:**

**T-AGS**

Length Overall353 ft  
Beam58 ft  
Displacement4,888 Long Tons  
Draft19 ft

  

**Production Status:**

**T-AGS 67**

Contract Award DateMar 2020  
Months to Completion  
a) Award to Delivery48 months  
b) Construction Start to Delivery58 months  
Delivery DateMar 2024  
Completion Of Fitting OutJun 2024  
Obligation Work Limit DateMay 2025

**Description:**

Naval Academy YP (Yard Patrol) craft are utilized to train midshipmen on piloting, seamanship, navigation, and engineering. The YP Service Life Extension Program (SLEP) extends the YP 676 Class service life approximately 10 years beyond the current average vessel age of 27 years. YP SLEP work items include but are not limited to the following: hull fendering, electronic navigation system components, paint and non-skid, damaged hull sections, hatches and deck planking, various pumps (bilge, seawater cooling, fire), and galley appliances. The SLEP will also include the overhaul of the engines and transformers, and propeller repair. The required repairs will vary by craft and will be conducted at both the U.S. Coast Guard Yard in Baltimore and private small business shipyards.
