Description:

The Office of the Secretary of Defense (OSD) is the principal staff element of the Secretary of Defense to develop and promulgate policies in support of the United States national security objectives. This office also provides oversight to assure the effective allocation and efficient management of resources, consistent with Secretary of Defense approved plans and programs, recommend resource allocations, and monitor the implementation of approved programs. The OSD includes the immediate offices of the Secretary and Deputy Secretary of Defense, Under Secretaries of Defense, Director of Defense Research and Engineering, Assistant Secretaries of Defense, General Counsel, Director of Operational Test and Evaluation, Assistants to the Secretary of Defense, Director of Administration and Management, and such other staff offices as the Secretary establishes to assist in carrying out assigned responsibilities.

Justification:

The Office of the Secretary of Defense request for \$47.944 in FY 2013 is in support of funding initiatives such as the Mentor Protégé Program, Enterprise Portals Program, Joint Capability Technology Demonstration, Long Range Planning, U.S. Mission to NATO, Combatant Commanders' Exercise Engagement and Training Transformation Program, and Wounded III and Injured Programs. Funding requested is for the modernization of office automation and Information Technology (IT) infrastructure requirements and procurement of mission essential new and replacement equipment for these components.

	Wajor Equipment COS	30 - Commander's Exercise Engagement & Training Transformation (CE2T2)

Remarks:

The Combatant Commander's Exercise Engagement and Training Transformation (CE2T2) program continues to support strengthening of Joint warfighting capabilities but with significant changes resulting from the SECDEF's efficiencies effort and disestablishment of U.S. Joint Force Command (USJFCOM, The Director, Joint Force Development Joint Staff J7 is responsible for the Joint Training Enterprise, which includes the Joint Force Trainer (JFT), Joint National Training Capability (JNTC), U.S. Forces Korea (USFK), Joint Deployment Training Center (JDTC), and Joint Knowledge On-line (JKO). The JFT supports the Combatant Commanders (COCOMs) with their Unified Command Plan 2004 responsibilities to certify their designated Joint Task Forces (JTF) are training and training provides the training infrastructure and support that integrates into the existing joint training environment. Procurement for the JNTC supports Training Transformation pillars that includes the infrastructure and equipment to support the Joint Training Enterprise Network (JTEN). The JDTC procurement provides training support for the Global Command and Control System, Joint (GCCS-J), the Joint Operation Planning and Execution Systems (JOPES), Common Operational Picture (COP), Joint Capability Requirements Management (JCRM), Joint Force Requirements Management (JFRM), and provides the command, Control, Computers and Communications (C4) systems of record and infrastructure to support that mission. JKO provides the enabling capabilities to support career-long joint learning continuum, joint professional military education and tailored common training standards to Service members for tasks that are jointly executed, resulting in trained, capable, and interoperable joint forces. Irregular Warfare Functional Training (IWFT), and Joint Innovative Training Methods and Tools (JITMT) have been eliminated as part of the Department's efficiency reductions.

Justification:

Efficiency Impact; eliminates 4 of the 15 Joint Force Trainer functions: joint intelligence training/standards; joint forces intelligence school; field assessment of joint fires training; and training on selected joint fires issues. Reduces the remaining Joint Force Trainer functions by 38 percent, and reduces Special Operations Command/Joint Force Command (SOC/JFCOM) by 30 percent. Eliminates the Joint Task Force Headquarters Readiness (JTF HQ) function.

JNTC FY 2012/13 funding enables distributed Joint training to a projected 95+ global warfighter training events per year. These funds provide for the replacement of the legacy JTEN network, which operates with an obsolete communications technology with a state-of-the-art Next Generation (NextGen) JTEN 2.0 network (current industry / DoD standard technology) that will greatly increase network capacity, make the management of multiple, large simultaneous exercises possible and facilitate coalition network connectivity as well as unclassified network services equipment for lifecycle replacement. The funds also provide interconnectivity with other Services/Gervice-Oriented Architecture and make implementation of Cross Domain Information Sharing technologies for the joint training enterprise more efficient. Modeling and Simulation (M&S) funding provides hardware/software needed for the Joint, Live, Virtual, and Constructive (JLVC) Federation. Departmental efficiencies reduce support to T2 pillars of instrumentation and feedback systems supporting joint requirements across Service and COCOM training programs. Additionally, these adjustments also affect Opposing Forces programs which provide joint context to the aforementioned training programs.

USFK FY 2012/13 funding provides equipment to deliver Joint M&S training environment required to replicate the complexity of current USFK operations. Specifically USFK funding develops the DoD enterprise architecture for integrating Service and agency M&S efforts to provide a training capability within the Korea peninsula that supports Secretary of Defense guidance on USFK transformation. This allows the US to meet international obligations and achieves Republic of Korea/US training interoperability requirements.

JDTC FY 2012/13 procurement funds support installation of GCCS-J network communications hardware to support the infrastructure required to host the JOPES, Situational Awareness, and Global Force Management applications training efforts. This directly supports DoD joint deployment, command and control, and simulation awareness training of COCOMs, Services, and agency staffs. Equipment includes GCCS-J servers, projectors, batteries, racks, monitors, network encryptions, and client workstations to support classroom training of JOPES, Joint Capabilities Requirements Manager, and Common Operational Picture applications. This equipment also enables remote reach-back training in support of Mobile Training Teams. Acquisition includes Life Cycle Replacement of equipment and Tactical Local Area Network Encryption (TACLANEs) for Wide Area Network (WAN) connectivity. In FY 2011, procurement funds will support the technical refresh and future GCCS-J version requirements for the JDTC mission.

JKO FY2012/13 procurement funds support infrastructure sustainment and expansion of the Joint Individual Training Toolkit, which is a set of web enabled individual and small group training products and services. The products and services are provided in response to Joint Knowledge On-line (JKO) stakeholder (COCOMs, Services, and Combat Support Agencies) prioritized training requirements.

JCW FY2012/13 procurement funds support infrastructure upgrade of equipment delivering modeling and simulation (M&S) and C4 capabilities to COCOM and Service Joint training.

Cyber Range Instrumentation FY 2013 procures a Cyberspace Training Range to support USCYBERCOM led Cyber Flag exercises, multi-COCOM exercises, and joint service training, testing and certification. The consolidation of disjointed modeling and simulation and cyber range development efforts will ensure efficient development of cyber opacities, saving the departmental resources. It is essential to develop a comprehensive M&S and cyberspace range framework accessible to all DoD components to accomplish the required cyberspace training and exercises. Recurring tactical-level live fire training events for cyber ops personnel; continuing cyber education, training, exercise and awareness needs analysis; methods, modes and media analysis and implementation to change network user behavior (culture and conduct); implementing training and exercises in degraded/denied environments; determining cyber M&S/Live Virtual Constructive needs.

Remarks:

Funding supports life cycle replacement and modernization of commercial off-the-shelf hardware and software infrastructure including servers, peripheral equipment, operating systems, and application software. All hardware and software infrastructure acquired will align with the OSD Enterprise Architecture.

AT&L uses this equipment and software in support of AT&L mission-specific systems. Functions include the improvement and efficiency of the acquisition process, alignment of acquisition processes for the Department; and transformation of acquisition business processes through change management.

Decrease in funding between FY12 to FY13: Reduction to meet efficiency costs.

The Mentor Protégé Pilot Program was established under Section 831 of the National Defense Au under DoD contracts and other federal government and commercial contracts. This program helps		
	to sustain a competitive supplier base which contributes to anortability in current a	na rature Defense acquisitions.
Justification: Through the Mentor-Protégé Pilot Program, large firms (mentors) receive incentives to provide tec small businesses, and HUBZone firms. The incentives provided to mentors are either a direct cost Historically Black Colleges and Universities, Tribal Colleges and Universities, Hispanic Serving Ins	reimbursement or a credit against subcontracting goals for costs incurred. Addition	ally, Mentor-Protégé agreements often involve the use of minority serving institutions (including

Remarks:

Description: The Office of the Director, Cost Analysis and Program Evaluation (CAPE) uses high end computer servers and workstations, networks, in-house developed software, and other DoD developed simulation models and applications to perform its mission and unique business functions. These computers, servers, and networks provide CAPE analysts with the ability to support mission functions that support the entire Department, such as Program Review, Program Objective Memorandum (POM) coordination, the Future Years Defense Plan (FYDP), and collecting, maintaining, and analyzing Defense Cost and Resource Center (DCARC) data. In addition, these sophisticated computer tools and high-performance servers (such as Unix) allow CAPE analysts to conduct research, studies, technical analyses, and collaborative studies within CAPE and with other DoD agencies, and provide analysts with the flexibility of running simulation models to produce valid analyses to support SecDef priorties.

Remarks:

Funds are are slated for reprogramming to OSD RDT&E. Request for reprogramming was included in the Nov/DEC prior approval reprogramming request sent to Comptroller on Jan 10, 2012 and are currently going through OMB/Comptroller/Congress approval chain. The reprogrammed funds will expire on Sept 30, 2012 and will be used to develop two special interest programs applications, the Contingency Acquisition Model (cASM) and the 3 in 1 Field Ordering Officer Tool, to support field acquisition of Commodities, Services and Construction in the contingency environment via contract and cash transactions respectively. This is a software development not requiring a material solution.

Remarks:

Provides for collaborative environments required for processing, analyzing, and distributing critical intelligence information between the U.S., NATO allies, and coalition forces in support of Overseas Contingency Operations (OCO). Supports expansion of U.S. and NATO allied multinational and bi-lateral intelligence information sharing capabilities via expanded terrestrial and satellite communications, information technology systems, integrated wide area and meshed networking, deployable command and control containers/elements, and information applications exploitation as it relates to U.S./NATO/coalition activities within USEUCOM Intelligence Fusion Center, NATO Special Operations Coordination Center, US Battlefield Information Collection and Exploitation System(s) and US JOIC world-wide architectures. Provides work stations, computing clusters, data servers, security accreditation, and network connections for co-located strategic, operational and forward deployed elements.

The Defense Rapid Innovation Program's purpose is to facilitate the rapid insertion of innovative technologies into military systems or programs that meet critical national security needs including operational challenges characterized by Joint Urgent Operational Needs. The Department's goals for Rapid Innovation Program are to transition:

Innovative technology, primarily from small businesses, that resolve operational challenges characterized by Joint Urgent Operational Needs (JUONs) or other critical national security needs.

Innovative technology, primarily from small businesses, into existing Acquisition Category (ACAT) I-IA, II, III, IV programs or into other defense acquisition programs.

DoD-reimbursed Independent Research and Development (IR&D) technology developed by defense industrial base tier 2 and 3 suppliers that resolve JUONs or other critical national security needs.

DoD-reimbursed IR&D projects developed by defense industrial base tier 2 and 3 suppliers into existing ACAT I-IA, II, III, IV programs, or into other defense acquisition programs.

(1) The Defense Rapid Innovation Program's purpose is to facilitate the rapid insertion of innovative technologies into military systems or programs that meet critical national security needs including operational challenges characterized by Joint Urgent Operational Needs.

Remarks:

JCTD procurement funds are intended to supplement the projects funded in the JCTD Program and other rapid fielding initiatives. The procurement funds are used to support initial acquisition of equipment for rapid transition into a program of record. Specifically, JCTD Procurement funding supports selected joint capability technologies that are being integrated into programs that have passed Milestone B and are conducting engineering and manufacturing development to meet validated joint needs. The aim is to achieve efficiencies by aligning resources for fully integrate these more mature capabilities sooner into either an existing system or a new system being deployed or employed. The result is a successful Milestone C decision. JCTDs rapid fielding efforts, with strong support from Combat Commanders (COCOMs), enhance joint capabilities by gaining an "on ramp" to conventional acquisition processes for joint needs in a system that emphasizes Service-sponsored core military capabilities. JCTDs concentrate on transitioning demonstration-proven capabilities into a PoR for sustainment of residuals and rapid acquisition and fielding of production models. The JCTD Procurement funding is pioneering a transformational concept for acquisition by providing a path for those capabilities that are agile and relevant for the current fight that must be put on a "fast track" to acquisition. The JCTD Procurement funding supports the Joint Capabilities Interoperability Development System (JCIDS) by addressing the needs of COCOMs directly. The Defense Wide funding for this program in BA3 and JCTD Procurement allows the Rapid Fielding Directorate, on behalf of the USD (AT&L), to support the spectrum of technology development through initial acquisition providing the COCOMs, Services, Agencies, and operators with a new model for tailoring acquisition solutions to meet warfigher needs.

The JCTD procurement funds reside in the OSD Major Equipment program element to support JCTD and Rapid Fielding projects. The Procurement funds provide for acquisition of operationally mature (beyond Milestone B) "joint unique" programs that do not have a traditional Service or Agency program of record. The funds enable transformational capabilities from JCTDs and rapid fielding efforts that may not be covered by Service programs to continue a logical progression of program phases and development in order to be suitable for full production and employment by the COCOMs. The Procurement fund provides the sustainment effort until transition is accomplished.

Remarks:

The Wounded Warrior Virtual Transition Assistance Program (VTAP) procures personnel, software development, equipment, and licenses to facilitate interchange of Service members' medical (Disability Evaluations), training, and transition records (Verification of Military Experience and Training (VMET) between DoD and the Department of Veterans Affairs. Virtual Transition Assistance Program (VTAP) is one-stop website with a suite of resources and tools to equip transitioning Service members, Veterans and Families with critical career and academic counseling, physical and behavioral health awareness, and financial management tools and skills. VTAP will develop into a full life-cycle suite of resources available to users from the time of their recruitment and into accession through transition. VTAP is being designed to be an open, scalable and extensible system, e.g., Certification and License Explorer. In addition to its inherent resources, components, and tools, it will also serve as a Gateway to external entities that enhance the user experience with inks and data sharing with USA Jobs and ebenefits, The National Resource Directory and DMDC's VMET application. This will enable DoD to meet the target of delivering TAP counseling to 85% or more of transitioning Service Members.

Description:

International Intelligence Technology and Architectures oversees, manages, and provides the US component of the multi-national Battlefield Information Collection and Exploitation System (US BICES) collaborative environment and intelligence sharing enterprise required for processing and disseminating critical intelligence information between and among the United States, North Atlantic Treaty Organization (NATO), allied, and coalition forces. The US BICES program procures and maintains a standing intelligence information sharing capability across DoD, Combat Support Agencies, and multiple Combatant Commands for the Under Secretary of Defense, Intelligence (USD(I)). This capability provides an "enduring" US and Coalition interoperable intelligence sharing multi-level secure Trusted Network Environment (TNE) enterprise architecture utilizing releasable elements of the Defense Intelligence Information Enterprise (DI2E) framework and Cloudbreak capabilities to support the full spectrum of intelligence operations and dissemination throughout the DoD community. Provides and supports expansion of the US, BICES multilateral, and BICES-like bilateral intelligence information sharing capabilities within each of the Unified Commands via expanded terrestrial and satellite communications, information technology systems, integrated wide area and meshed networking, deployable containers/elements, and advanced Joint Intelligence Operations Center (JIOC)-IT/Distributed Common Ground/Surface System (DCGS) releasable analytical applications. Procures the hardware and software needed to establish the US BICES capability as a core infrastructure and enterprise for the intelligence component of the DoD Future Mission Network (FMN). Continues support to the (US as framework nation) US/Coalition Special Operations Forces supporting NATO and worldwide intelligence needs for the Global Pursuit mission and the Intelligence Fusion Center at the Joint Analysis Center, UK, in support of NATO. Procures work stations, enterprise hardware and so
